QRelix

HOW-TO GUIDE

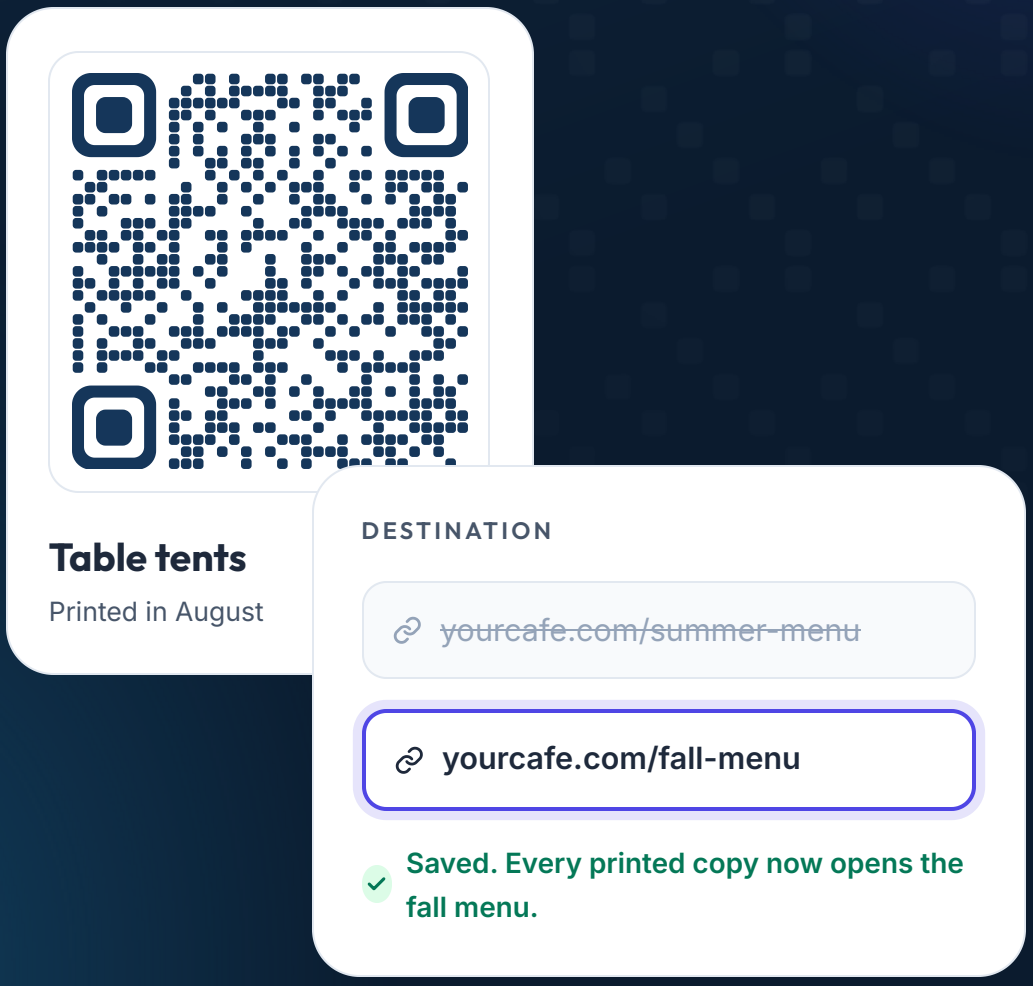

Change the link after you print

Point a printed QR code at a new page in seconds. No reprint.

1 minute
to finish

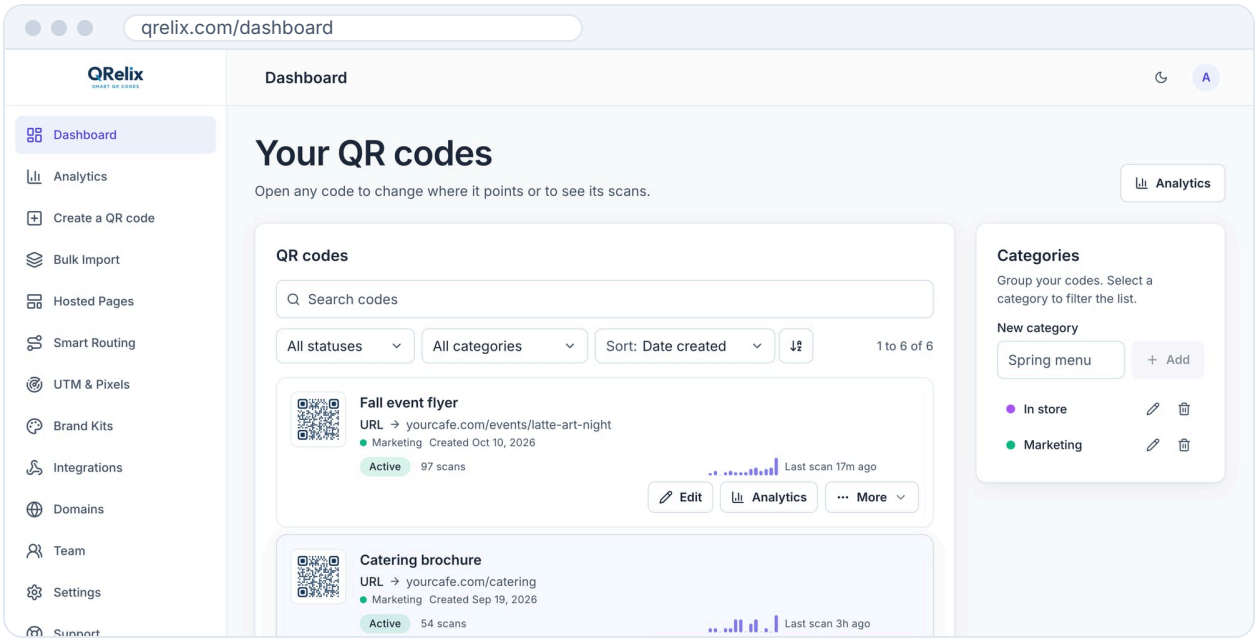

Every plan
Free, Pro, and Team

6 steps
with screenshots

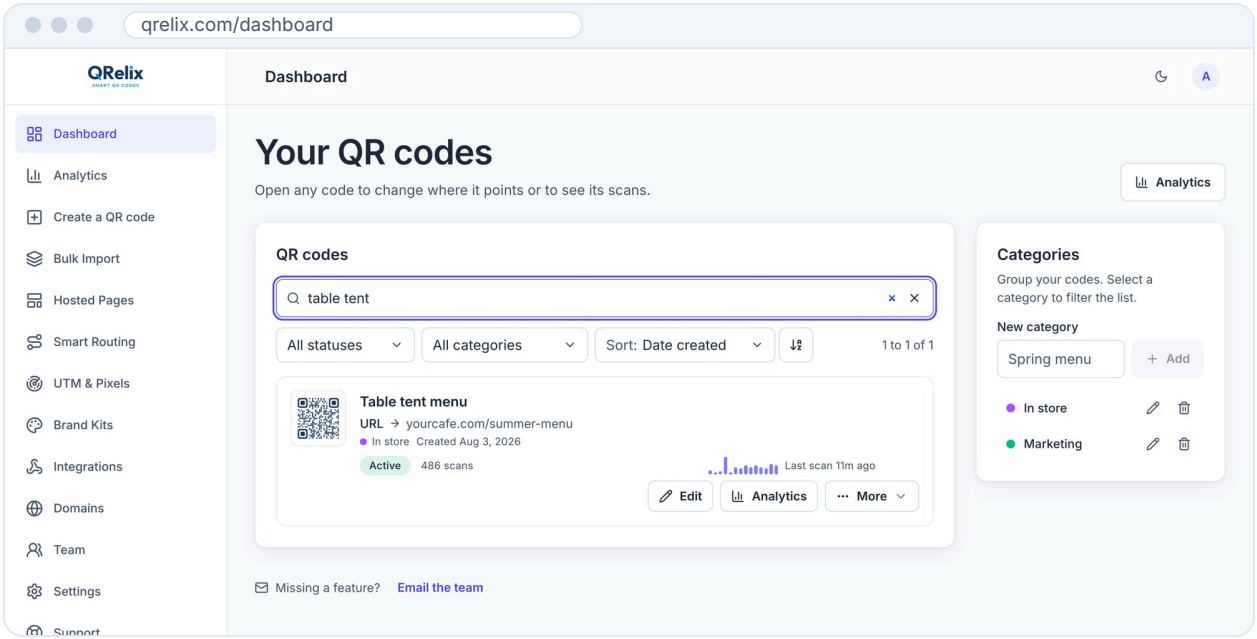

1 Open your dashboard

Sign in at qrelix.com. Your dashboard lists every QR code in your workspace with its destination, status, and scan count.

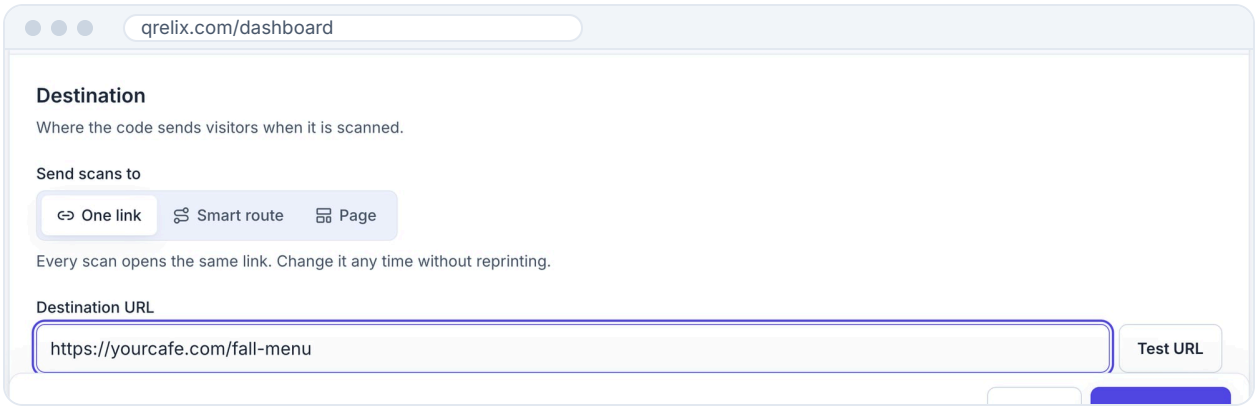

2 Find the code and select Edit

Search by name, or filter by category. Select Edit on the code that is already printed.

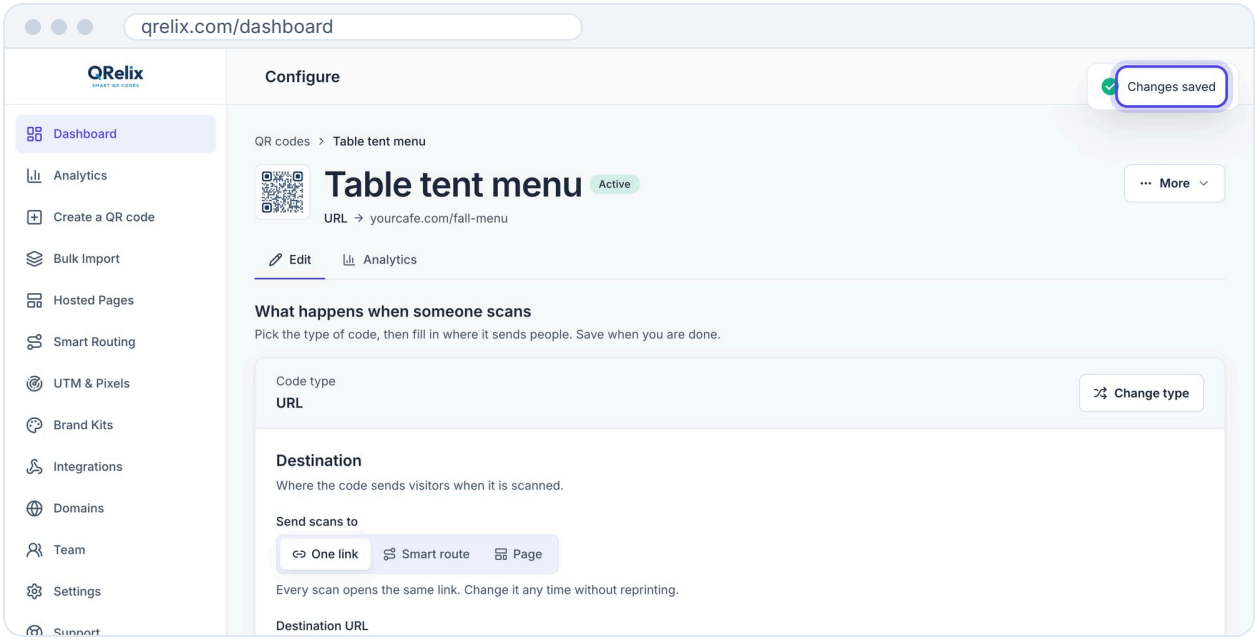

3 Replace the destination

Under Destination, select the Destination URL and type the new link. If you leave out https://, QRelix adds it. Select Test URL to open the new page and check it first.

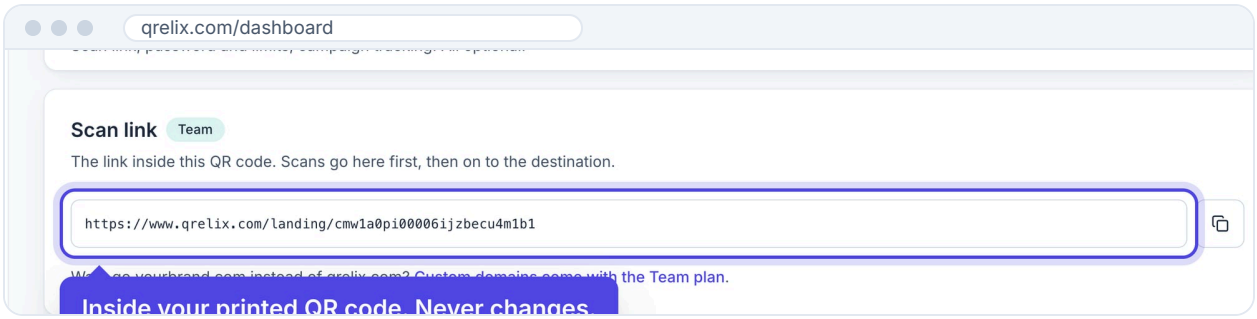

4 Save your changes

Select Save changes in the bar at the bottom of the page. The new destination is live the moment it saves: the next person to scan lands on the new page.

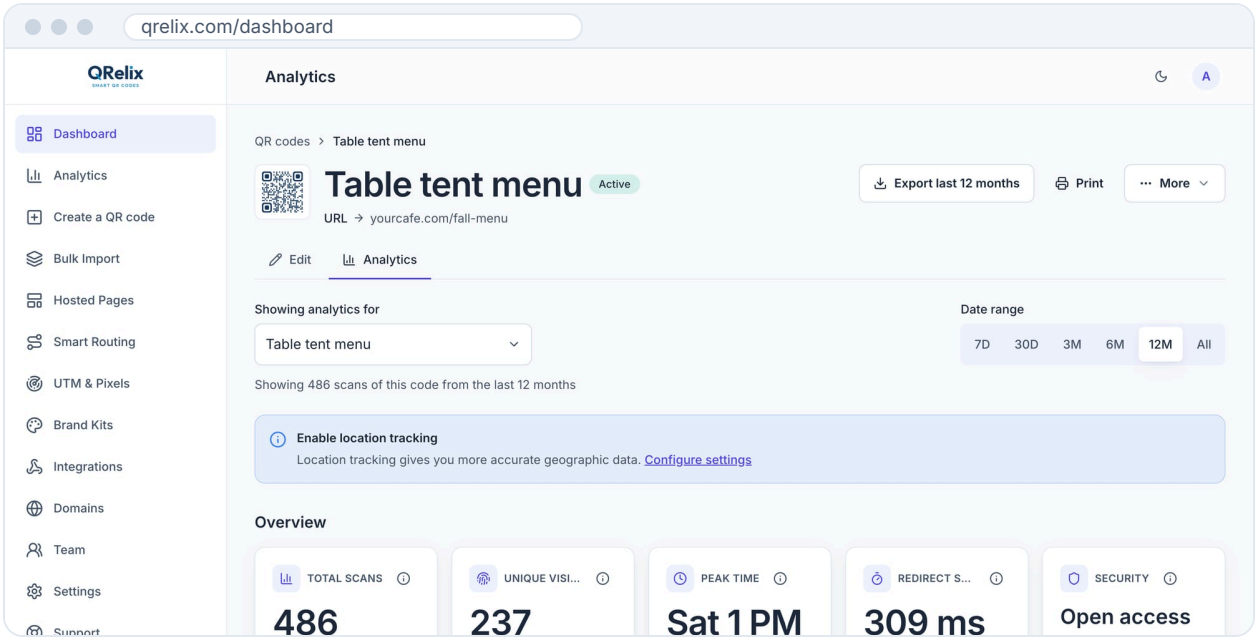

5 Your printed code keeps working

Open More settings to see the scan link. It is the link inside your printed QR code, and it never changes. QRelix forwards every scan to the destination you set, so the codes you already printed open the new page.

6 Scans stay in one place

Select the Analytics tab. Scans from before and after the change are counted on the same code, so a reprint never splits your numbers.

Good to know

Dynamic codes only

Only dynamic QR codes can change after printing. A static code, such as a Wi-Fi network code, holds its content in the image itself.

Change it as often as you like

There is no limit on edits. Point a code at a seasonal menu, an event page, or a sale, then switch it back.

Test before you save

Select Test URL next to the destination to open the new page in a new tab before you save.

Nothing to reprint

The image never changes, so you do not need to download or send a new file to your printer.

Create your first smart QR code.

Free plan, no credit card. Edit the link after printing and see every scan.
