QRelix

HOW-TO GUIDE

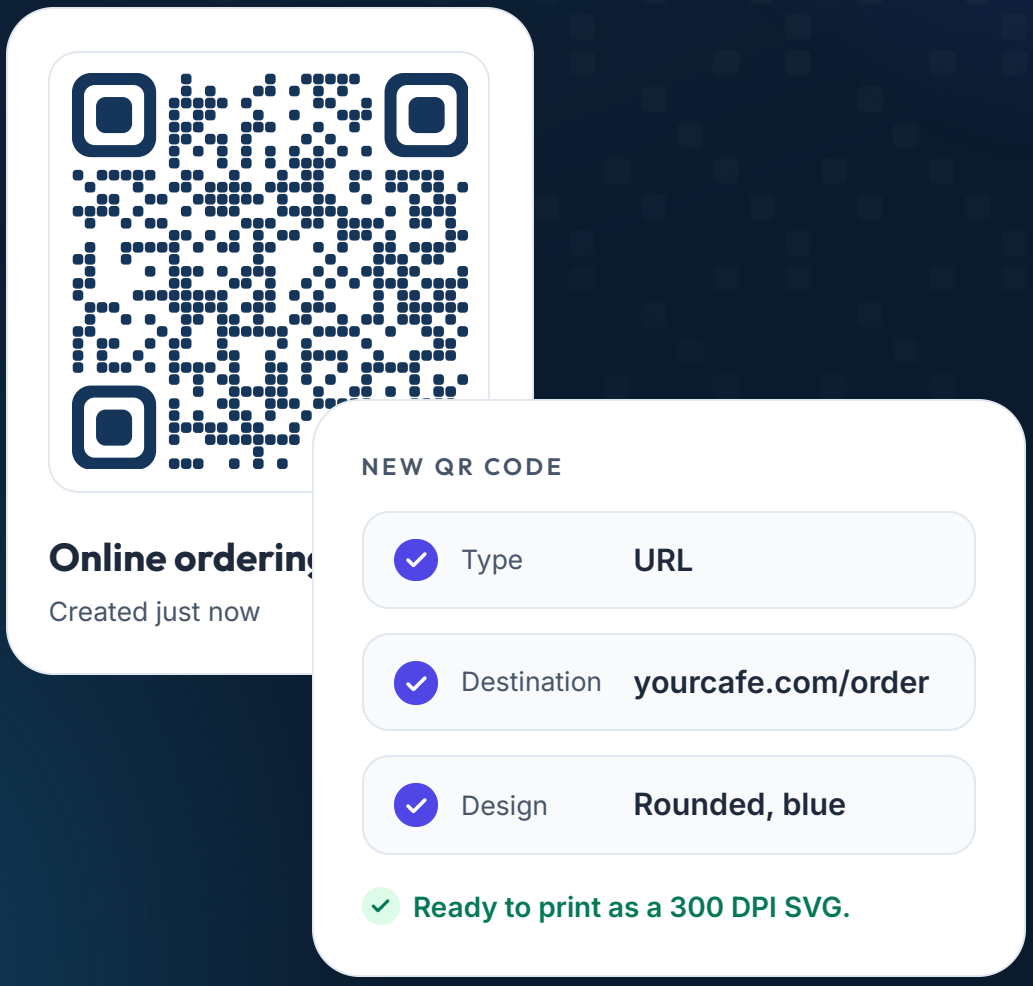

Create your first QR code

A dynamic QR code you can edit later and track, in about a minute.

1 minute
to finish

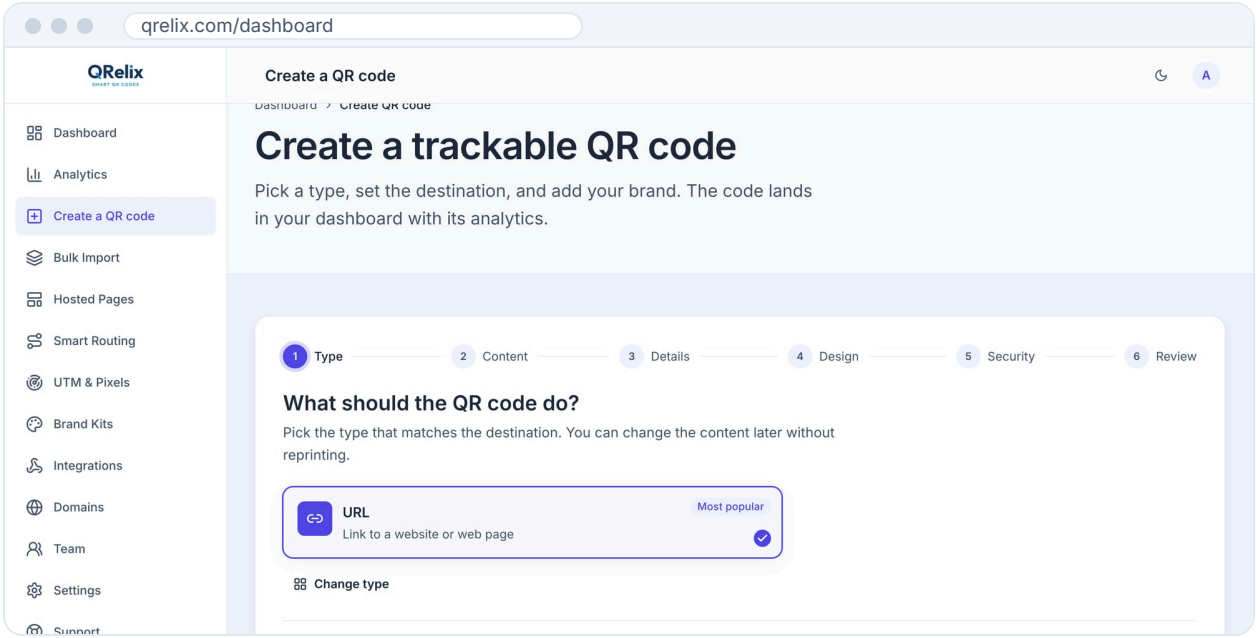

Every plan
Free, Pro, and Team

6 steps
with screenshots

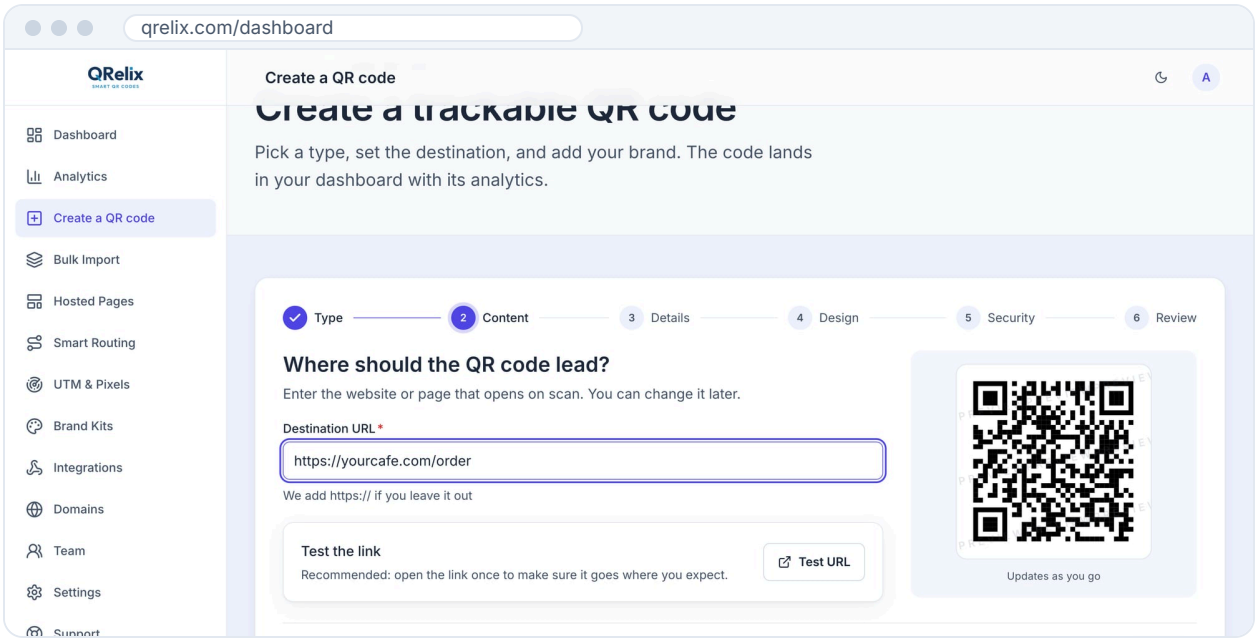

1 Start a code and choose what it does

Sign in at qrelix.com and select Create a QR code in the sidebar. Then pick a type. URL opens any web page; there are also hosted pages (menus, PDFs, link in bio), Wi-Fi, contact cards, reviews, social profiles, and more.

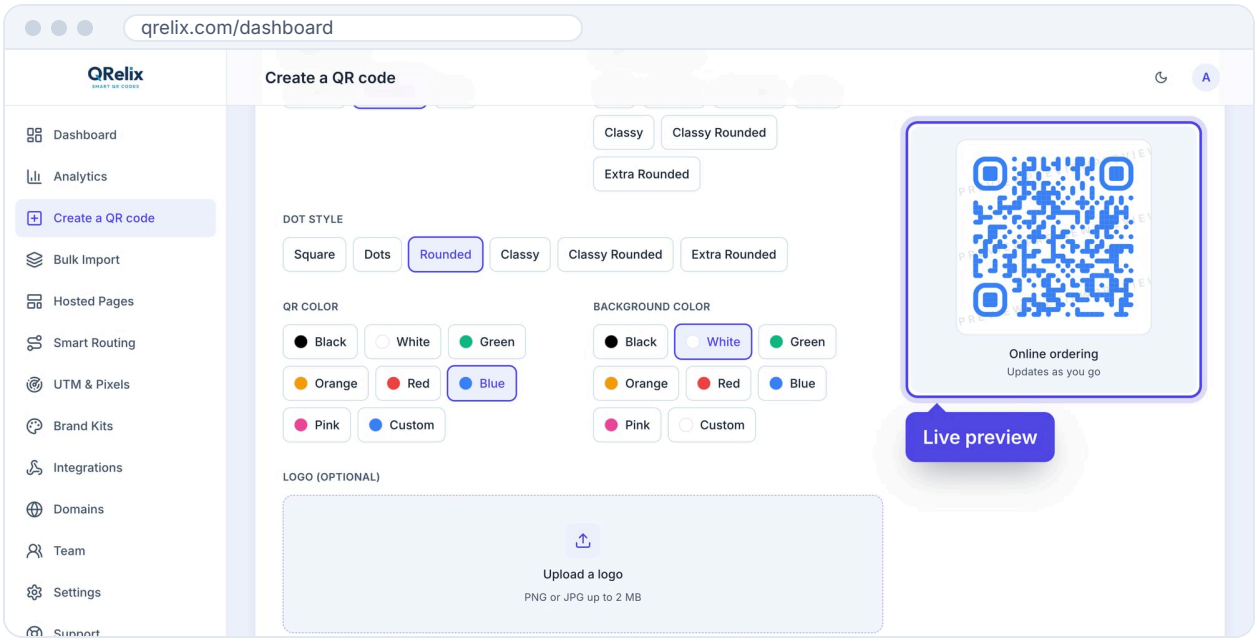

2 Enter the destination

Type or paste the link. Select Test URL to open it and check it first. You can change this destination any time later, even after printing.

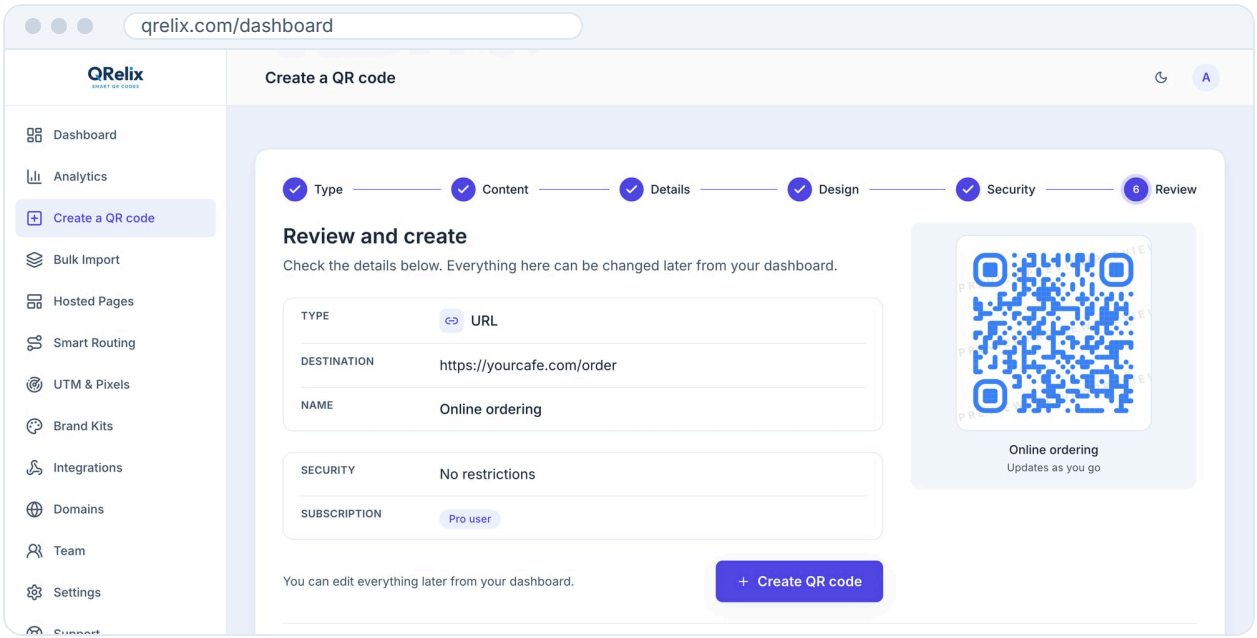

3 Design it

Start from a preset, then adjust the corner and dot styles and the colors. Add your logo if you like. Keep enough contrast so phones can still read the code.

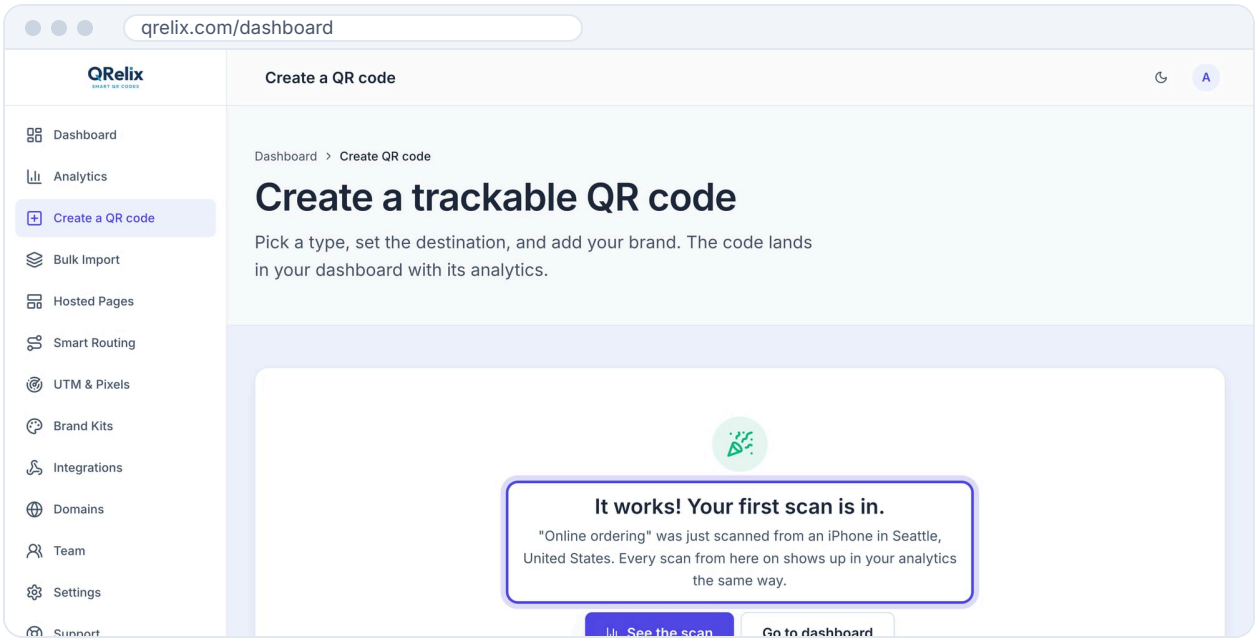

4 Review and create

Check the type, destination, and name, then select Create QR code. Everything can be changed later from your dashboard.

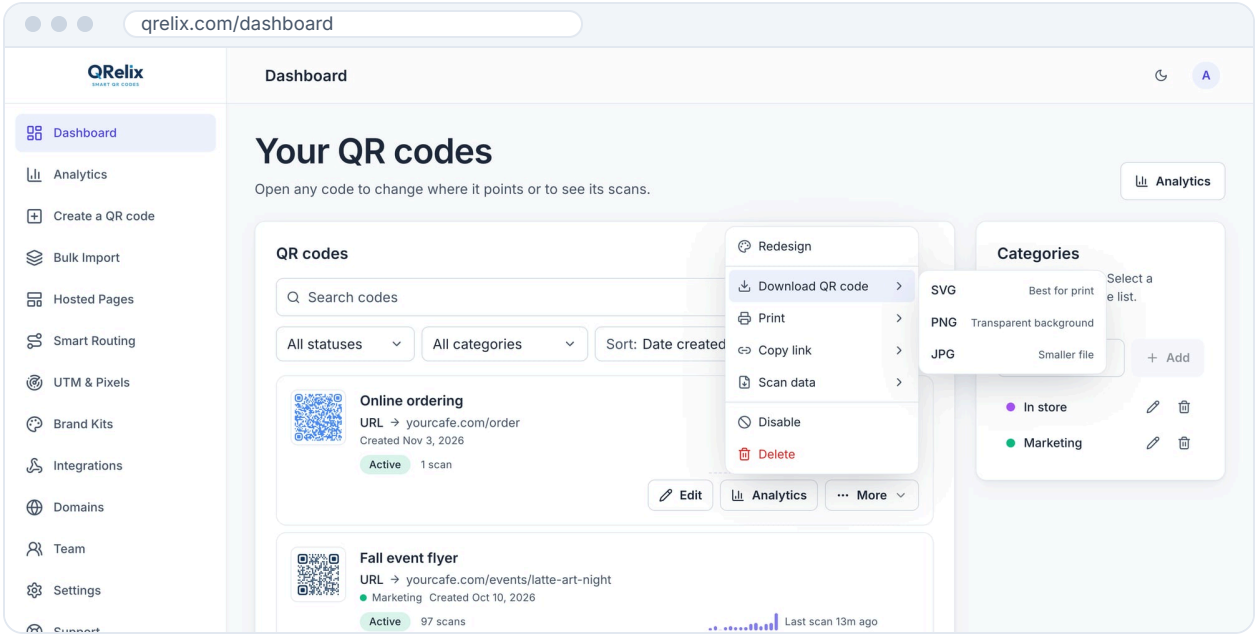

5 Test it with your phone

Point your phone's camera at the code on screen and tap the link. The page shows your first scan as soon as it comes in, with the device and city.

6 Download and print

Your code is in your dashboard. Open More, then Download QR code, and choose SVG for print (300 DPI), PNG with a transparent background, or JPG.

Good to know

Every code is dynamic

Every type except a static Wi-Fi code is dynamic: you can change where it goes later without reprinting, and every scan is counted.

Print at the right size

For print, download the SVG. Keep the code at least 2 cm (0.8 in) wide, and bigger for posters read from a distance.

Test before you print

Scan the code from the screen and from a test print, in the light where it will hang.

Add security later

Passwords, schedules, expiration, scan limits, and geofences can all be added from the code's edit page at any time.

Create your first smart QR code.

Free plan, no credit card. Edit the link after printing and see every scan.
