HOSTED PAGES GUIDE

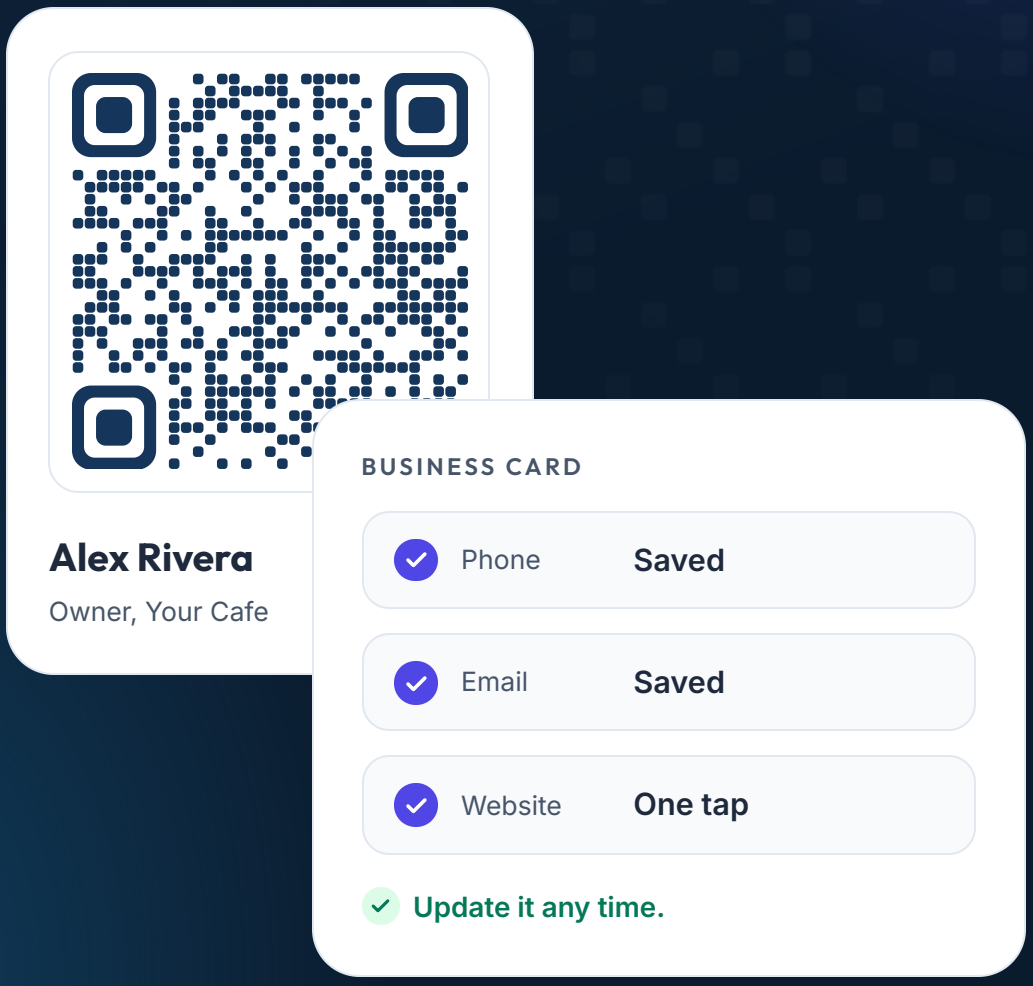

Make a digital business card

One scan saves your name, number, and email to their phone.

1 minute
to finish

Every plan
Free, Pro, and Team

3 steps
with screenshots

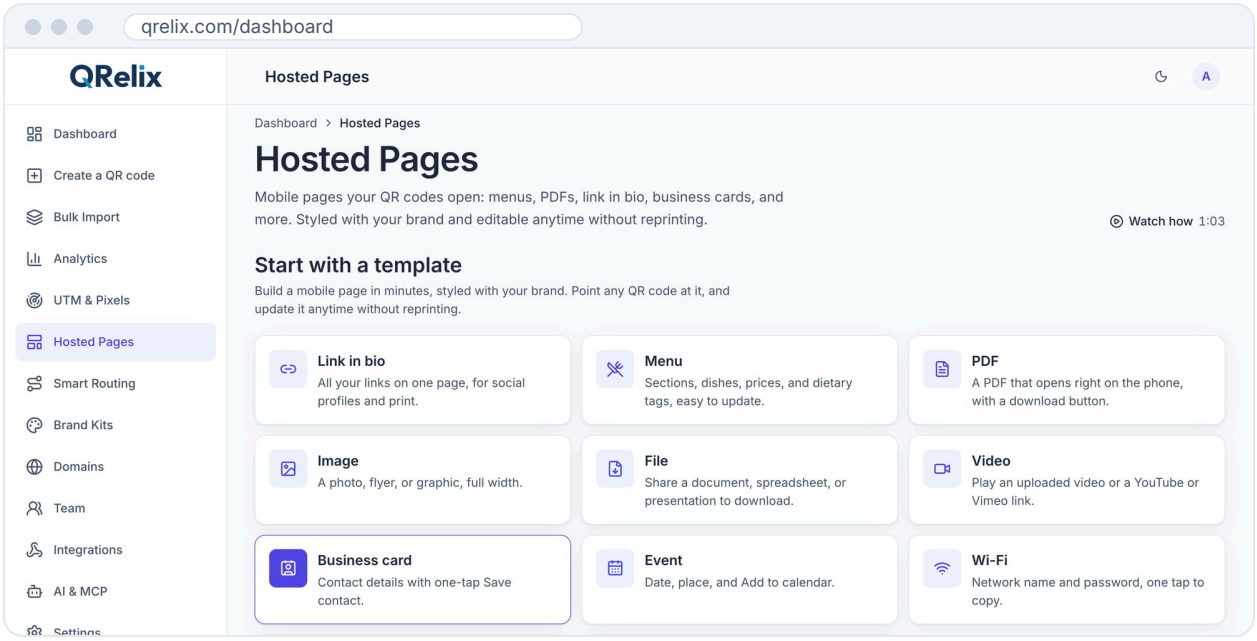

WHY IT MATTERS

A card that never runs out.

- **One scan** Saves you to their contacts
- **Always current** New number? Edit, no reprint
- **Trackable** See how many people scanned

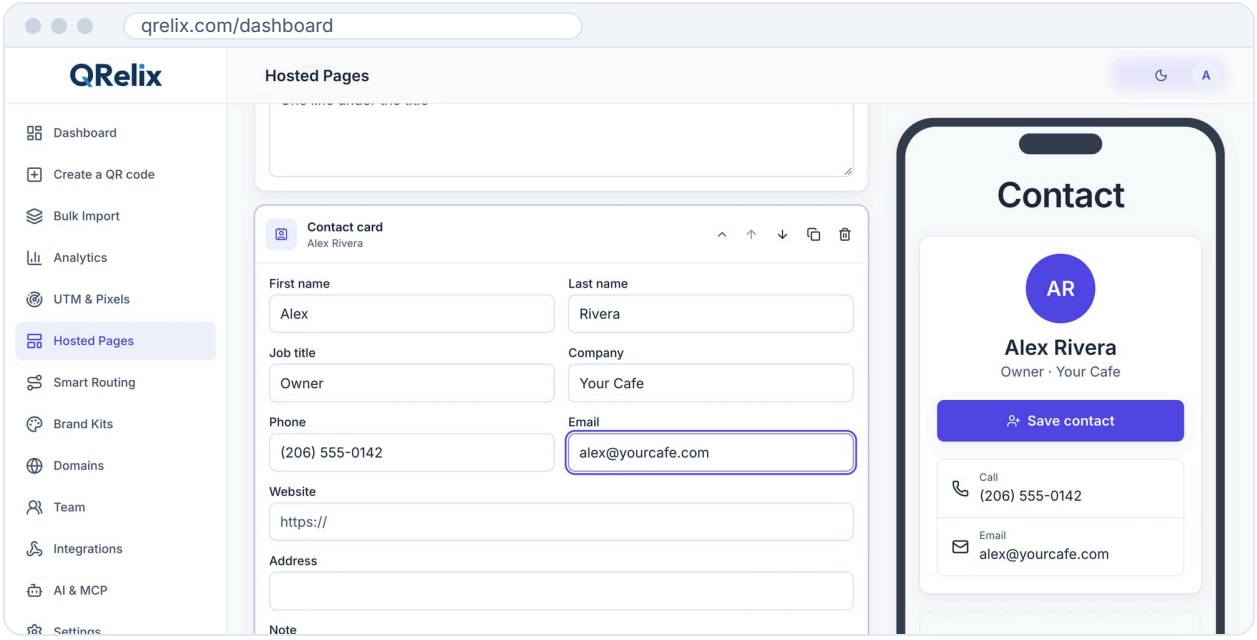

1 Start from the business card template

Open Hosted Pages in the sidebar. Under Start with a template, select Business card.

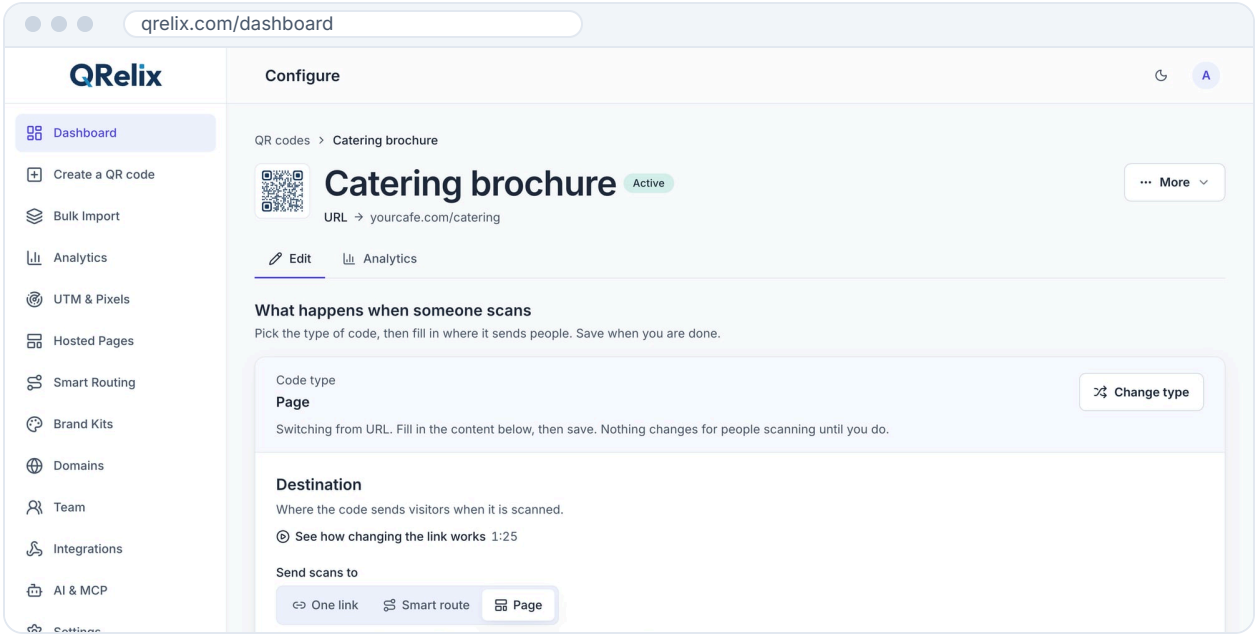

2 Add your details

Fill in your name, job title, company, phone, email, and website. The phone preview shows the card as people will see it. Add social icons below if you like.

3 Point a QR code at it

Open a QR code and select Edit. Under Send scans to, choose Page, pick your card, and select Save changes. Then print the code on your paper card, badge, or booth sign.

Good to know

Print it small

A business card code works at about 2 cm (0.8 in) wide. Leave clear space around it.

One card per person

Give each person on your team their own page and code, so you can see whose cards get scanned.

Add your socials

Use the Social icons block for Instagram, LinkedIn, and more.

Free to start

One hosted page is free. Pro makes hosted pages unlimited.

Create your first smart QR code.

Free plan, no credit card. Edit the link after printing and see every scan.
