QRelix

HOW-TO GUIDE

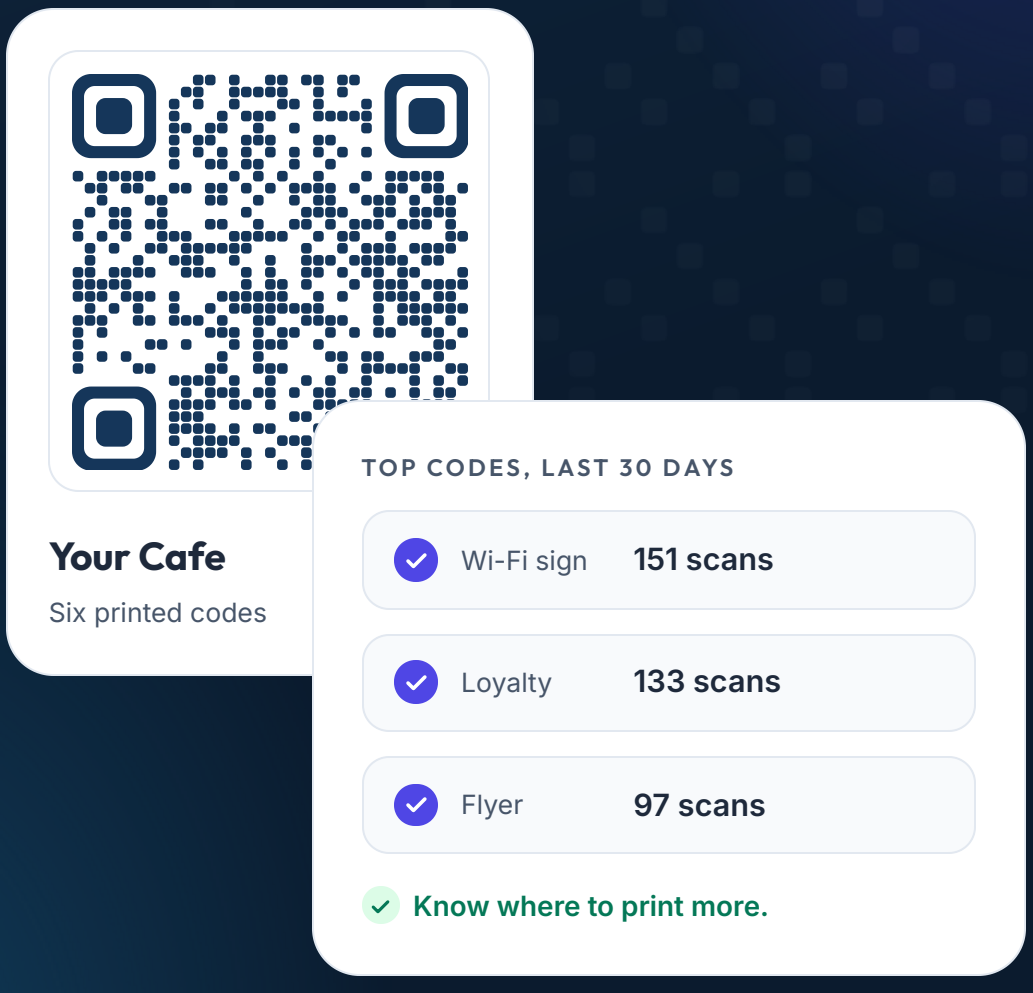

Find your best QR code

Compare every code side by side, and see which print is really working.

WHAT TO DO WITH IT

Let the scans decide what you print next.

- **Winning** Print more, in more places
- **Slipping** Change the link, or the offer
- **Quiet** Move it, or retire it

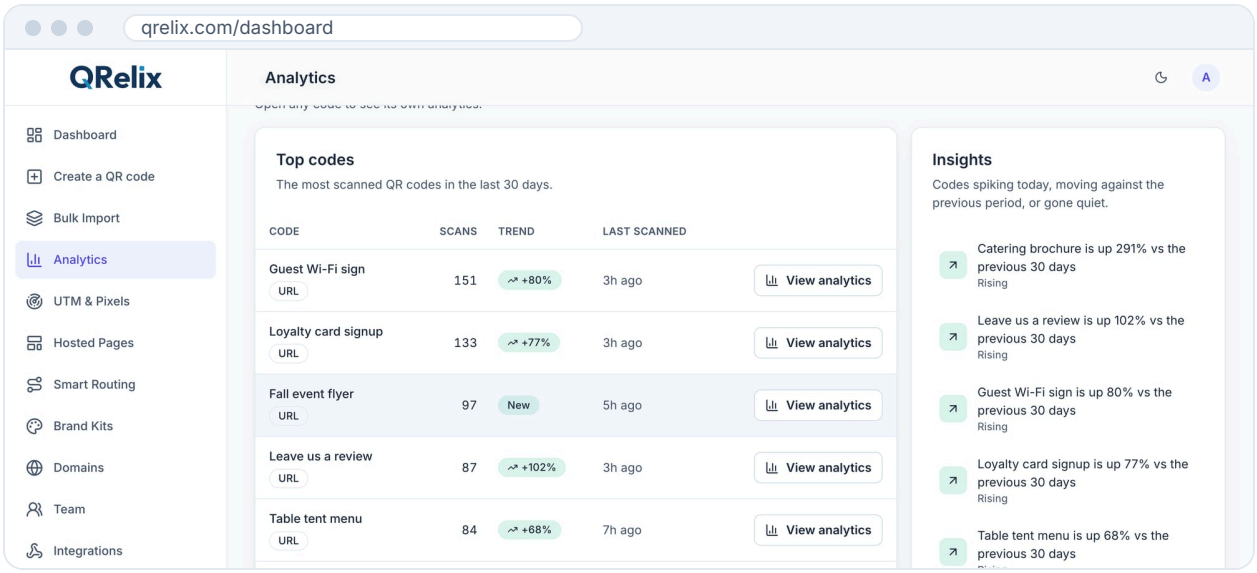

1 Start with the whole workspace

Open Analytics in the sidebar and choose a date range. The overview adds every code together: total scans against the previous period, unique visitors, and how many of your codes were scanned.

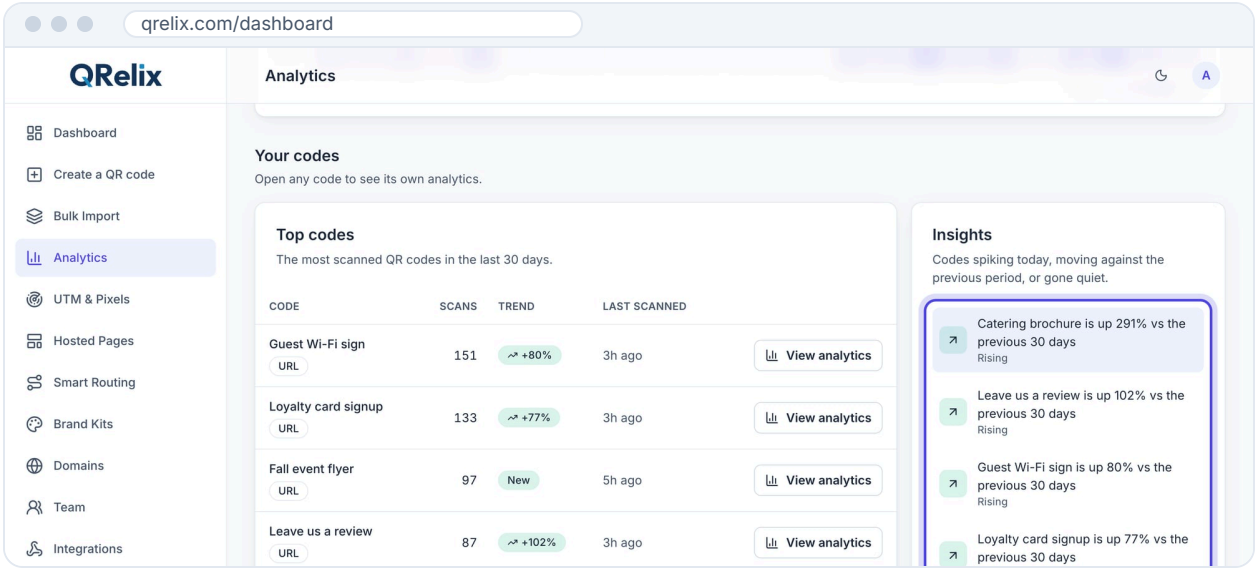

2 Rank your codes

Top codes lists every code by scans in the range, with a trend against the previous period and the time of its last scan. The busiest code is not always the one growing fastest, so read both columns.

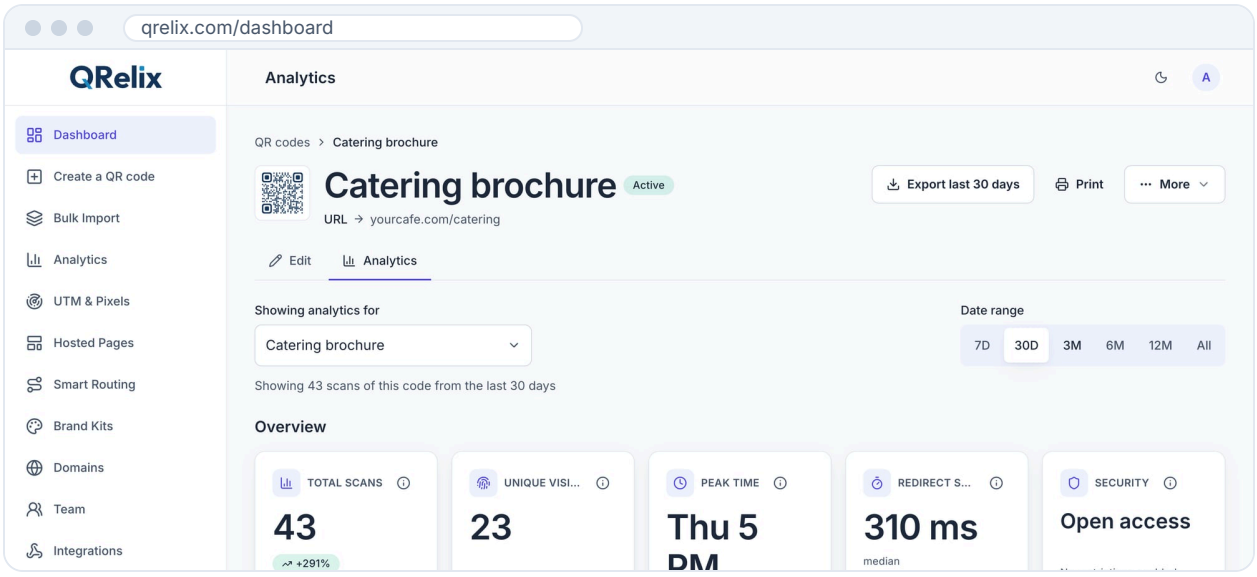

3 Let Insights point the way

Insights flags codes that are spiking today, moving against the previous period, or have gone quiet, so you do not have to read every row. Select one to open that code's analytics.

4 Open one code

Select a code in Top codes or Insights, or choose it under Showing analytics for, to see its own scans over time, busiest hours, locations, and devices.

Good to know

Compare like with like

A code printed last week has had less time than one from last year. Use a date range both codes were live for.

One code per placement

Give the window, the table tents, and the flyer their own codes, so you learn which placement works.

Print or share the report

Select Print at the top of workspace analytics for a page you can hand to a client or a manager.

Every plan

Workspace analytics are on Free, Pro, and Team. Free shows scan detail for the last 30 days, and totals stay forever.

Create your first smart QR code.

Free plan, no credit card. Edit the link after printing and see every scan.
