QRelix

HOW-TO GUIDE

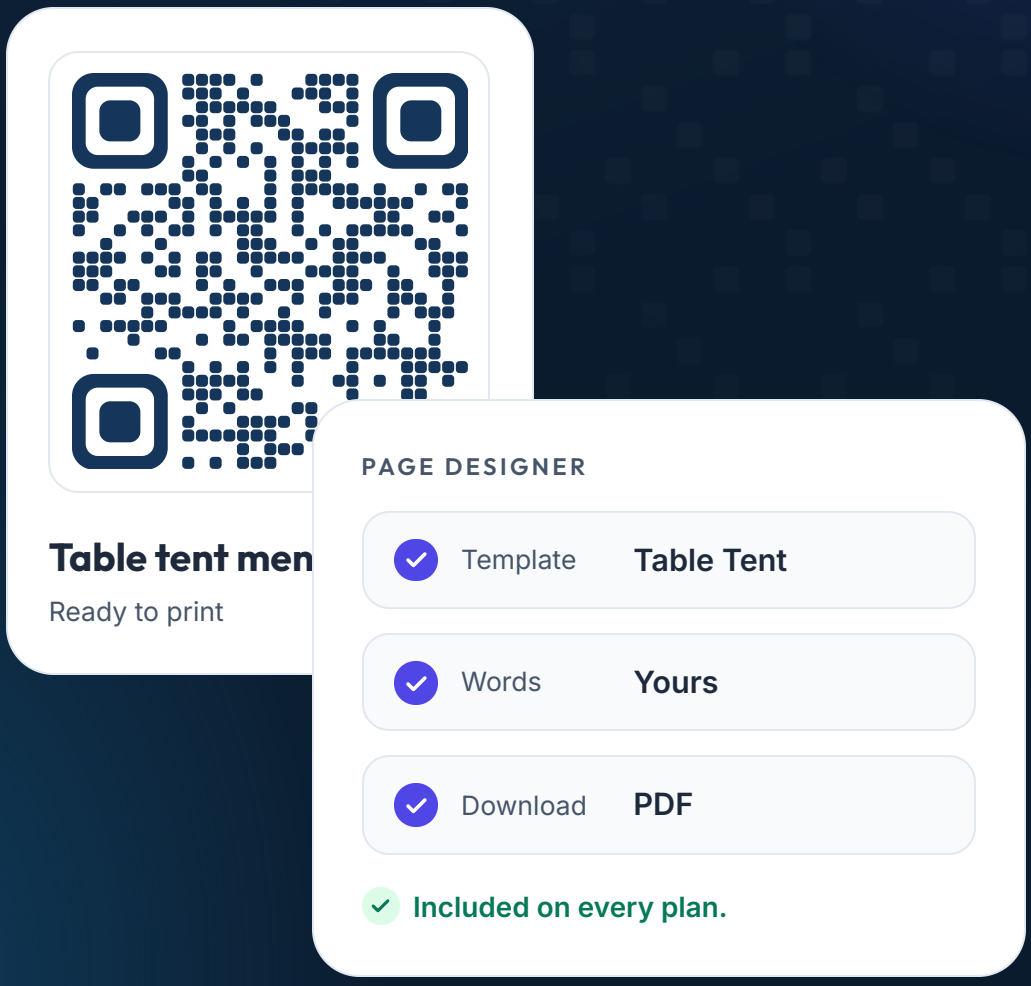

Design a print-ready flyer

Put your QR code on a table tent, poster, flyer, or sticker, ready to print.

5 steps
with screenshots

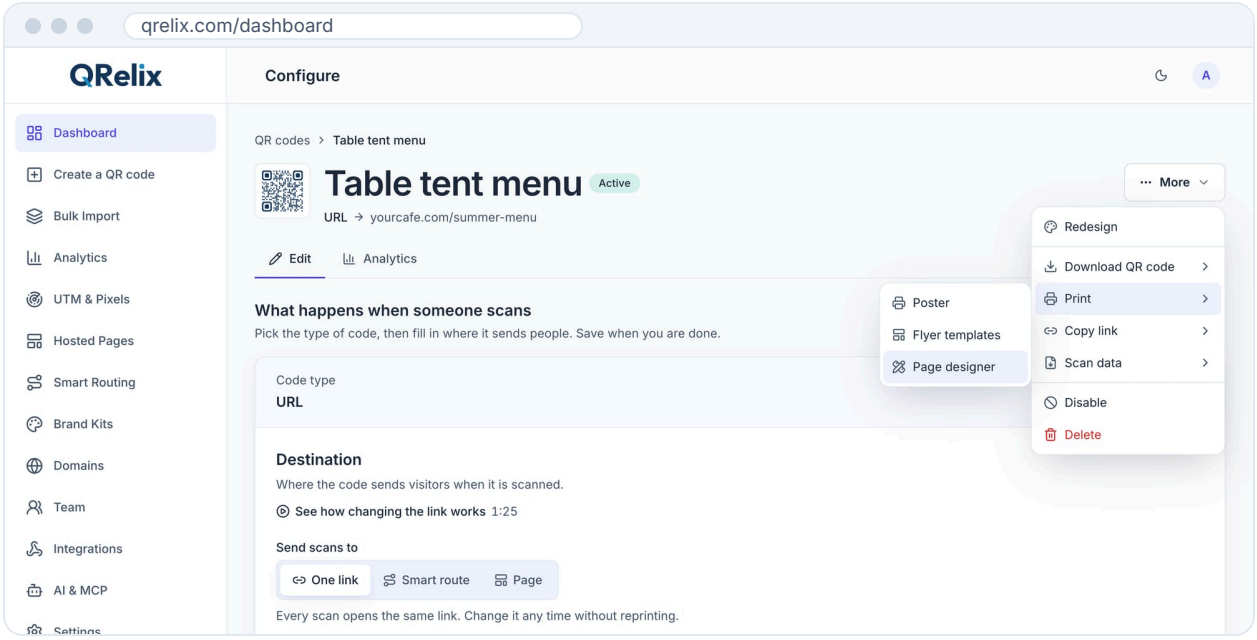

WHY IT MATTERS

Give people a reason to scan.

- **Say what it does** See the menu, get the deal
- **Make it fit** Table tents, posters, stickers
- **Print it** A sharp PDF, any printer

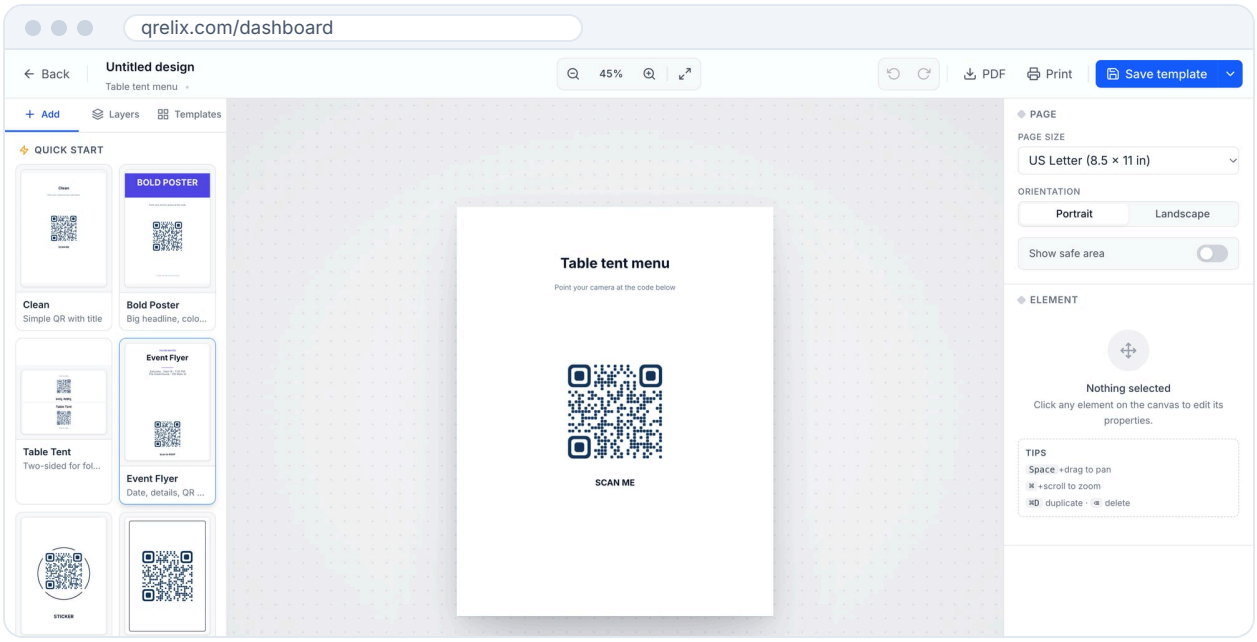

1 Open the page designer

Open a QR code, select More, then Print. Poster prints a simple poster right away, Flyer templates offers ready-made layouts, and Page designer lets you lay out the page yourself.

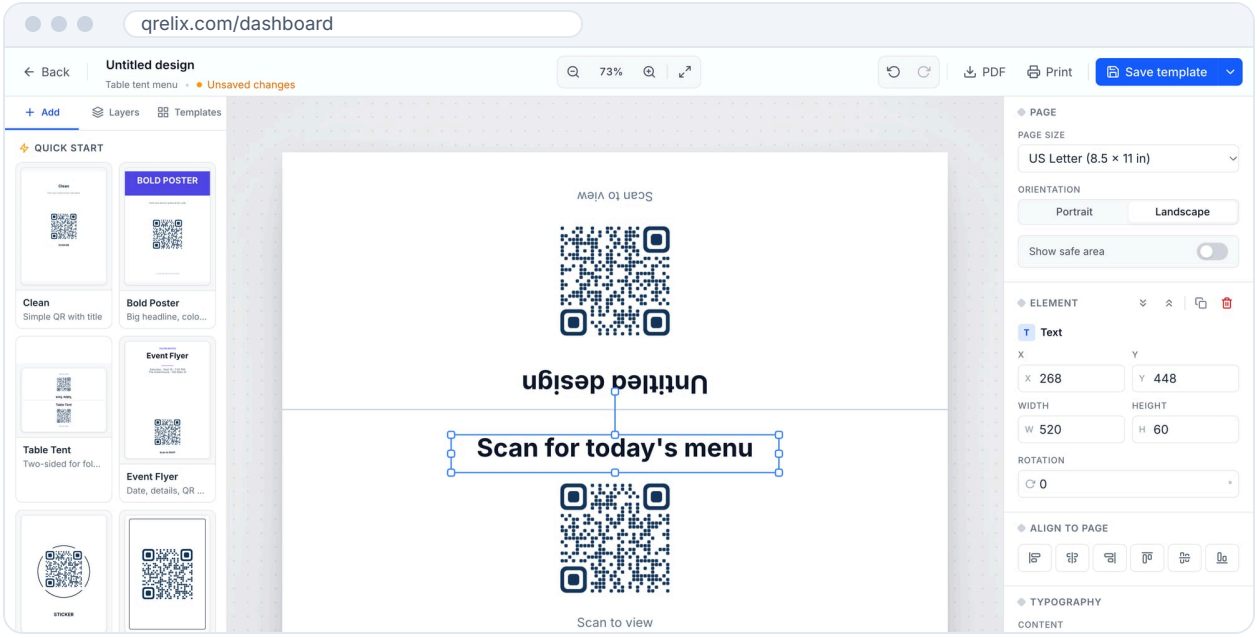

2 Pick a template

Under Quick start on the left, pick a layout: Clean, Bold Poster, Table Tent, Event Flyer, Sticker, or Minimal. Your code is placed in it, ready to edit.

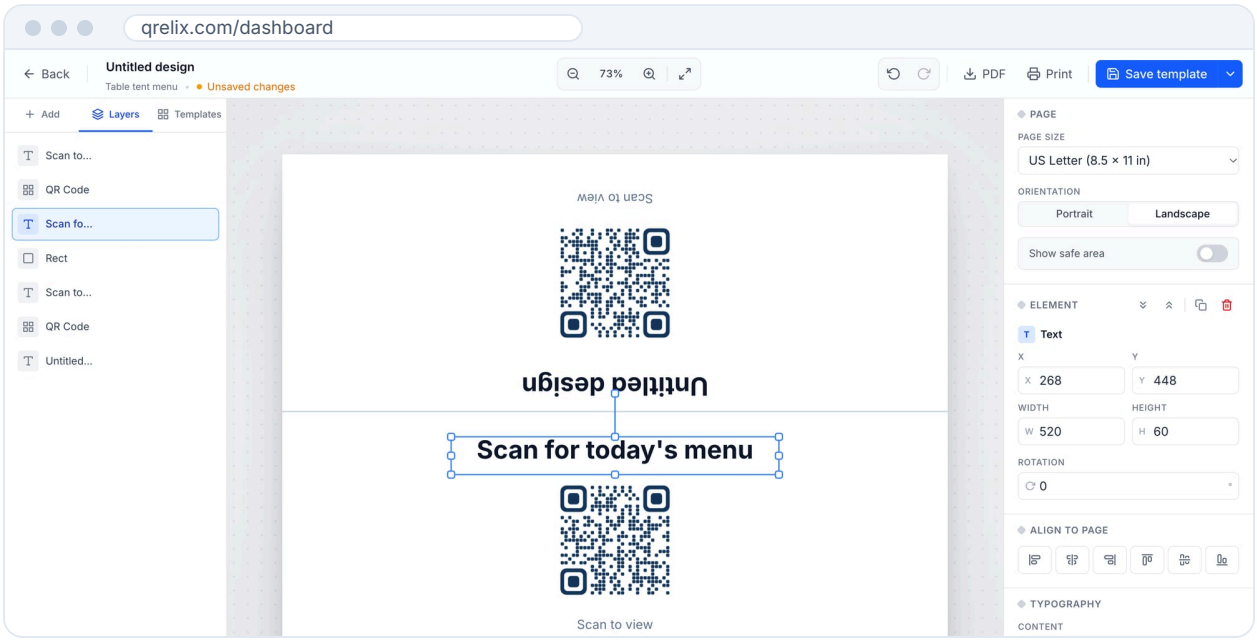

3 Change the words

Select any text on the page, then change it under Content on the right. Say what scanning does, such as Scan for today's menu, in a size people can read from a few steps away.

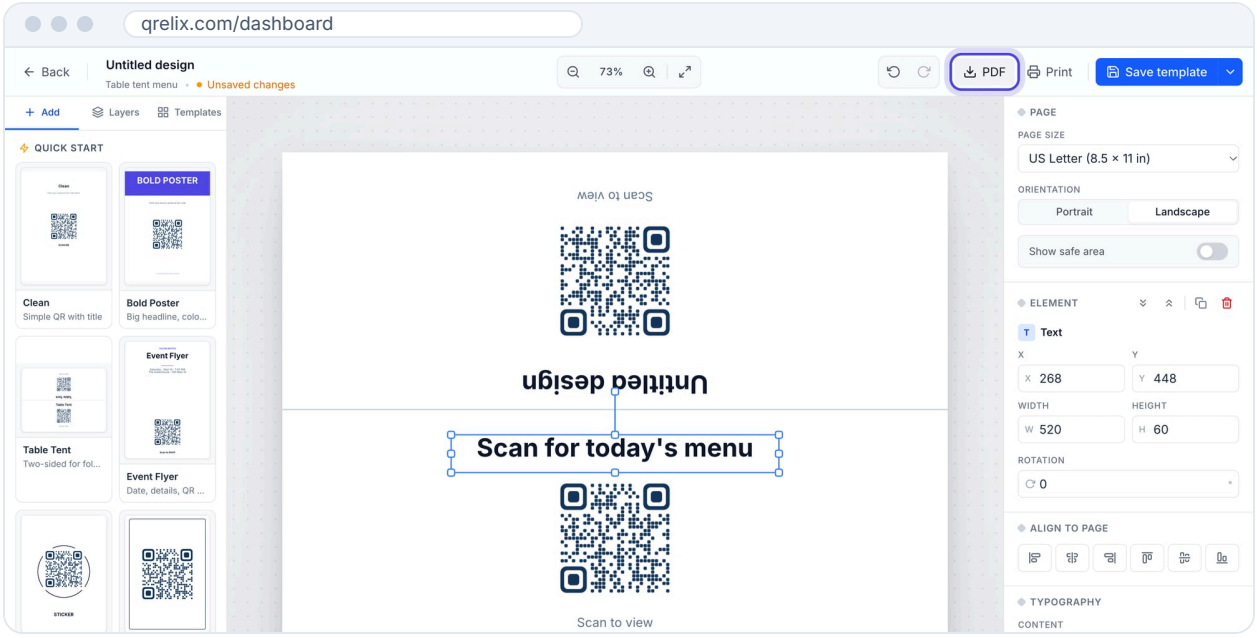

4 Add your own touches

Open Add for headings, text, images such as your logo, and shapes. Drag to move, use Layers to reorder, and undo any step.

5 Download the PDF

Select PDF at the top to download a print-ready file at the page size you chose, or Print to send it straight to a printer. Save template keeps the layout for your other codes.

Good to know

Print big enough

Keep the code at least 2 cm (about 0.8 in) wide for a table, and larger for a wall people scan from a distance.

Leave space around it

Keep the quiet border around the code clear of text and pictures, so phones read it quickly.

Save it as a template

Select Save template to reuse the layout for your other codes.

Every plan

The page designer and flyer templates are on Free, Pro, and Team.

Create your first smart QR code.

Free plan, no credit card. Edit the link after printing and see every scan.
