QRelix

HOW-TO GUIDE

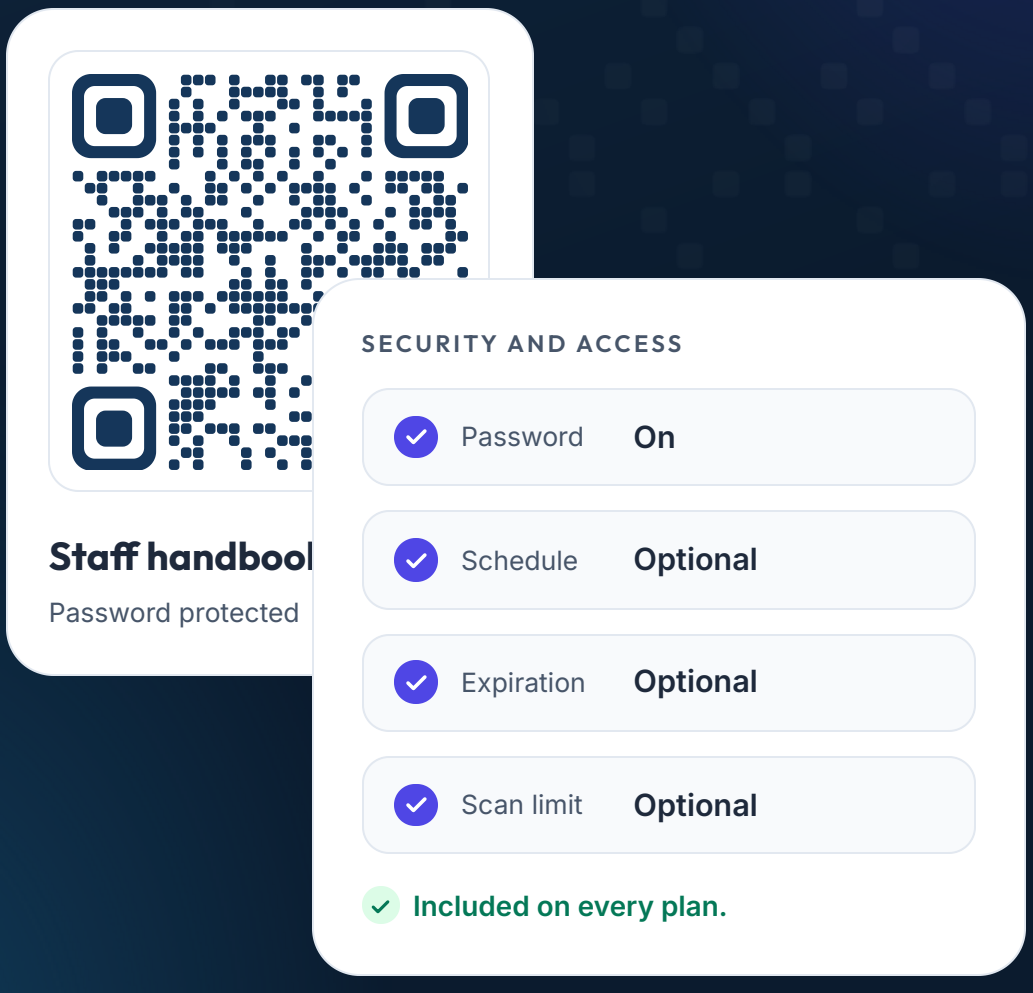

Protect a QR code

Add a password, a schedule, an expiration date, or a scan limit.

1 minute
to finish

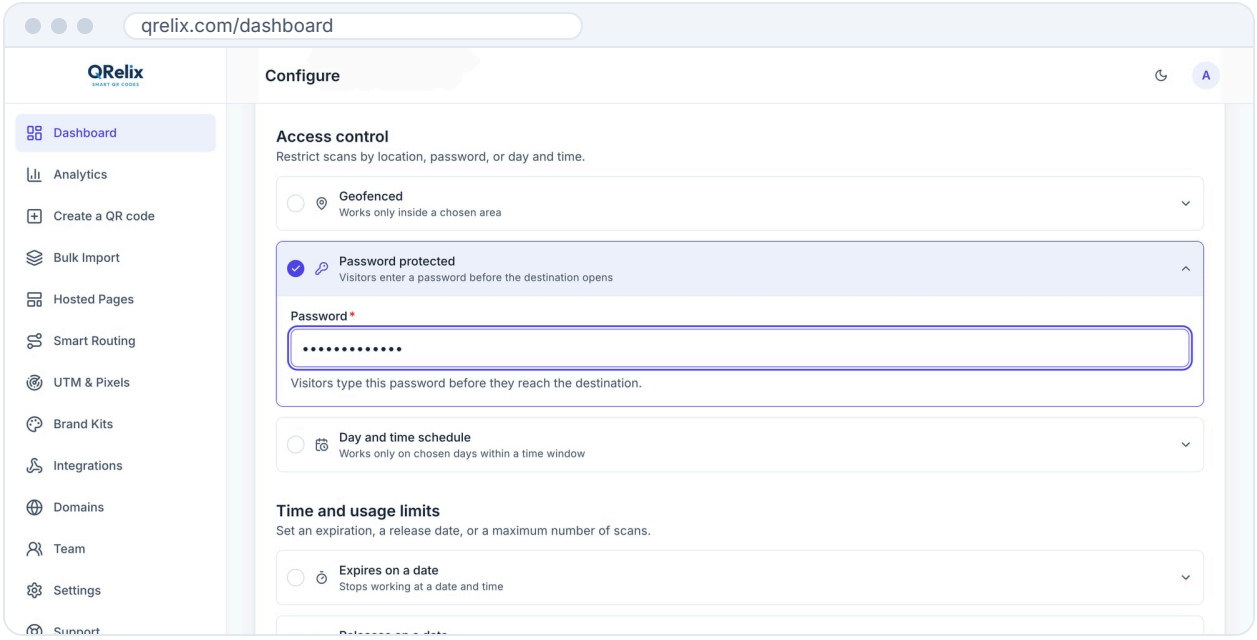

Every plan
Free, Pro, and Team

4 steps
with screenshots

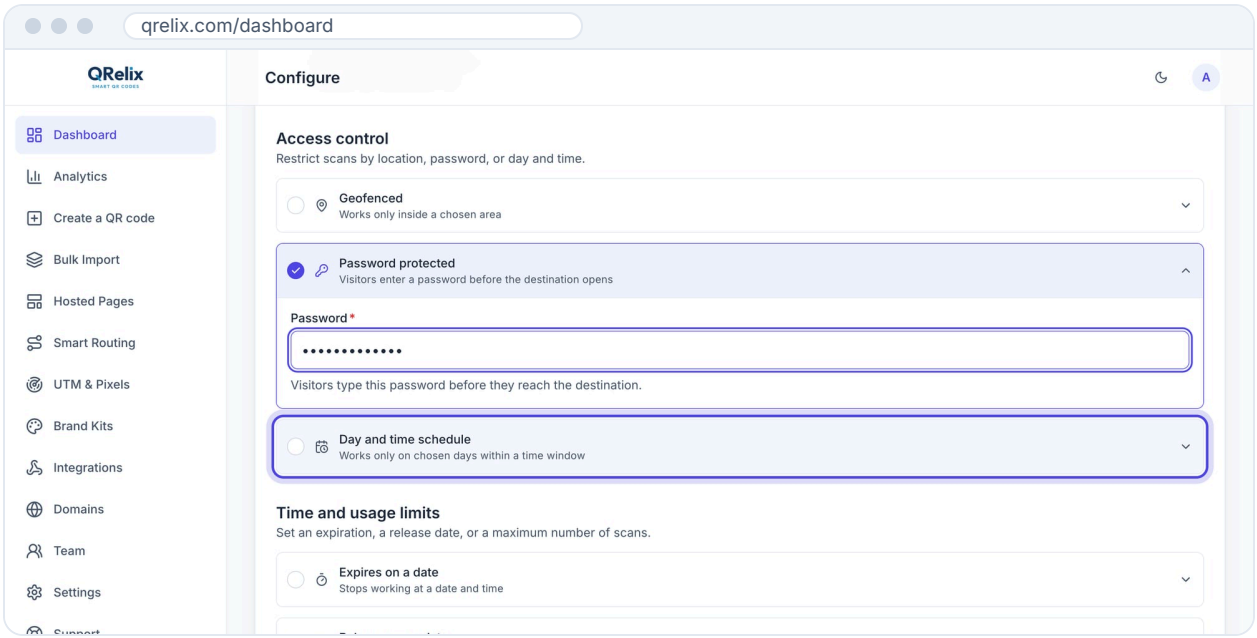

1 Add a password

Open the code, select Edit, then More settings, and go to Security and access. Select Password protected, type a password, and select Save changes.

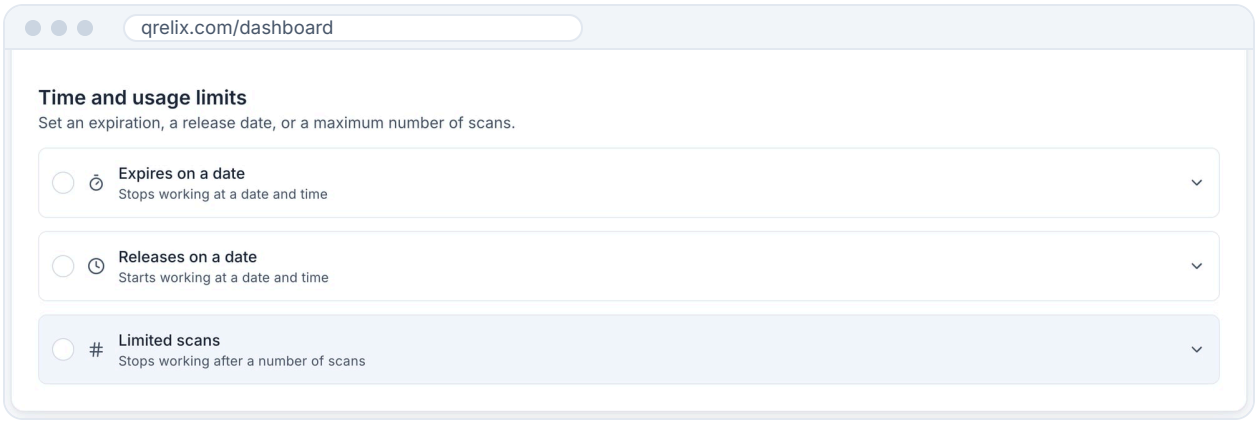

2 Or choose another rule

One access rule applies at a time. Day and time schedule works only on chosen days within a time window. Geofenced works only inside an area you choose.

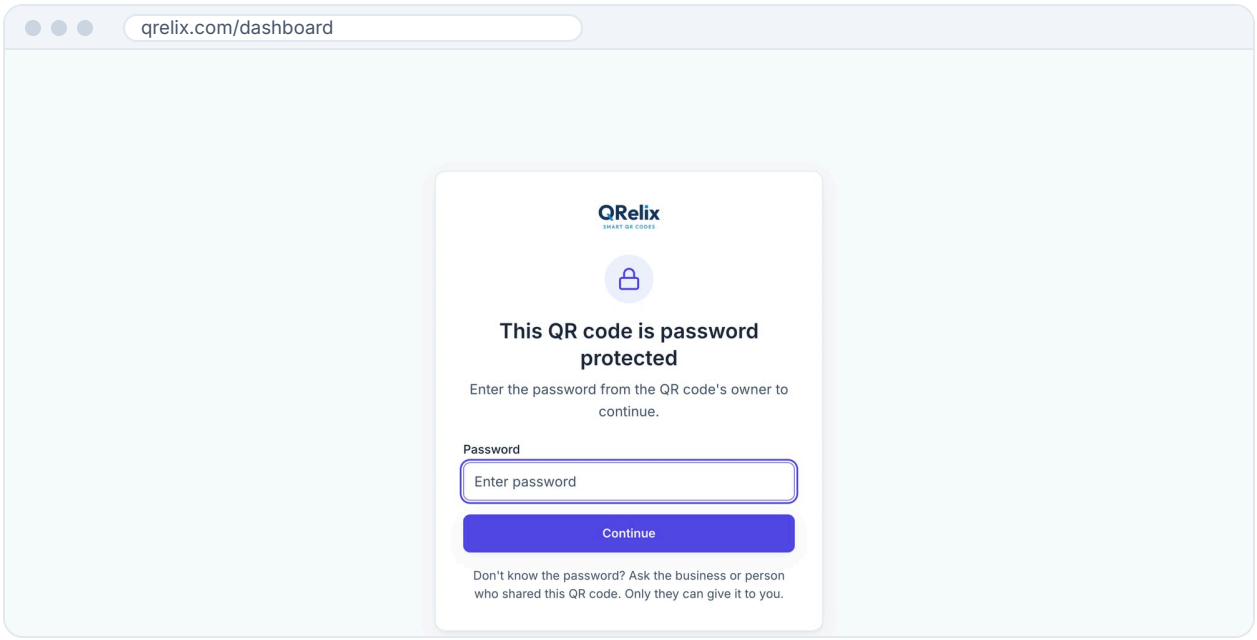

3 Time and usage limits

Expires on a date stops the code at a date and time. Releases on a date starts it at one. Limited scans stops it after a number of scans, which suits coupons and limited offers.

4 What people see

People who scan see a password page before the destination opens. Security settings can be changed or removed at any time, even after the code is printed.

Good to know

One access rule at a time

A code can use one security rule at a time, so pick the one that fits. Switching takes a few clicks.

Every plan included

Passwords, schedules, expiration, release dates, scan limits, and geofencing are on every QRelix plan.

Share the password well

Print the password somewhere only the right people will see it, not next to the code.

Nothing to reprint

Add, change, or remove a rule at any time. The printed code stays the same.

Create your first smart QR code.

Free plan, no credit card. Edit the link after printing and see every scan.
