QRelix

HOW-TO GUIDE

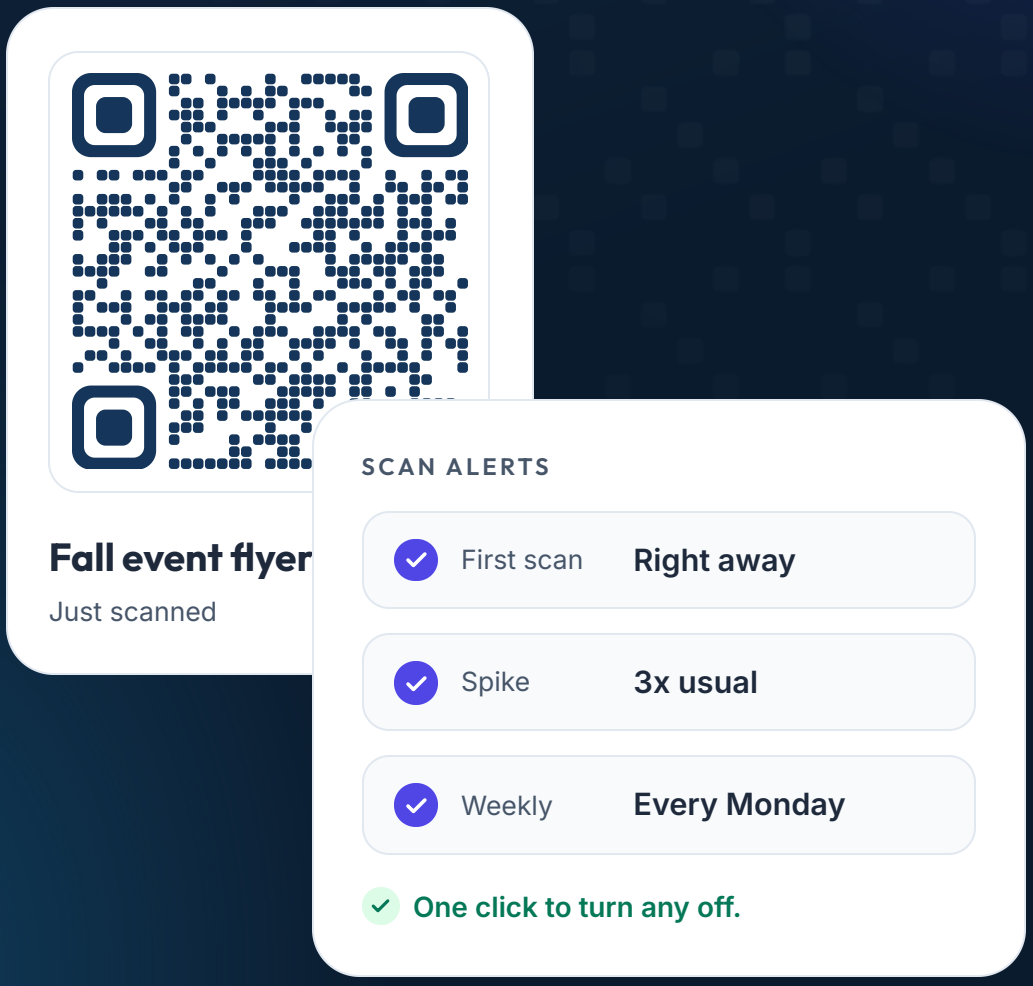

Get scan alerts and weekly reports

Know the moment a new code is scanned, when one takes off, and when one goes quiet.

WHY IT MATTERS

Your codes tell you how they're doing.

- **First scan** Proof the print is out there
- **Quiet codes** Something moved: go check
- **Spikes** Something is working: do more

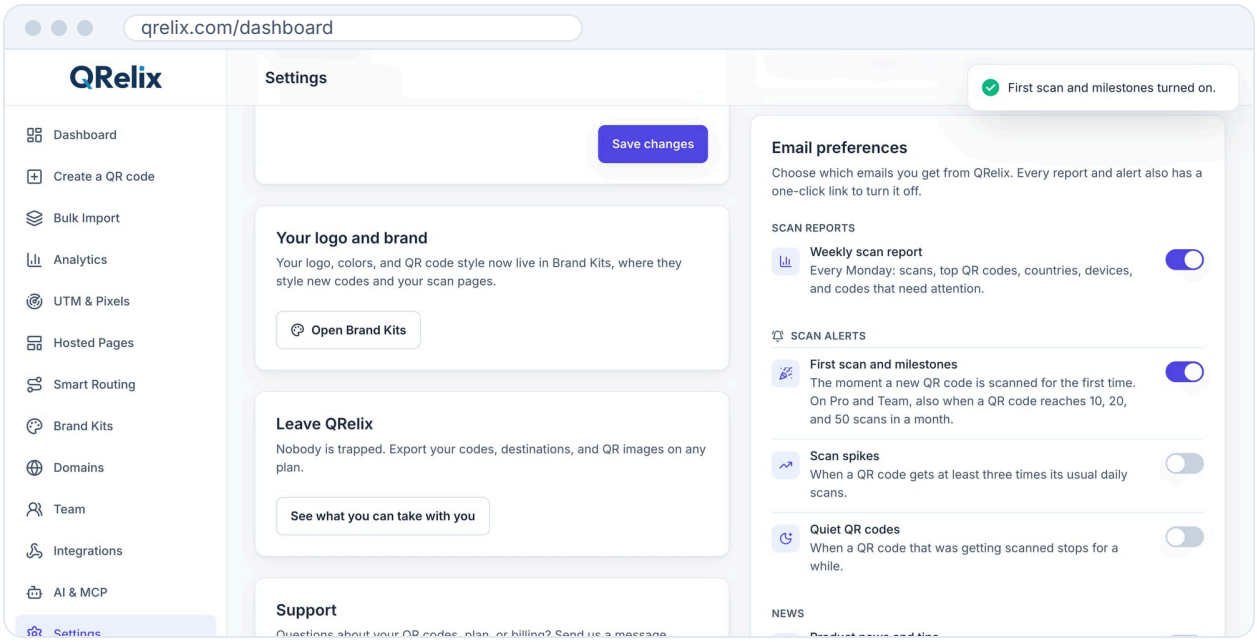

1 Turn on the weekly report

In Settings, under Email preferences, turn on Weekly scan report. Every Monday it sums up scans, top QR codes, countries, devices, and codes that need attention.

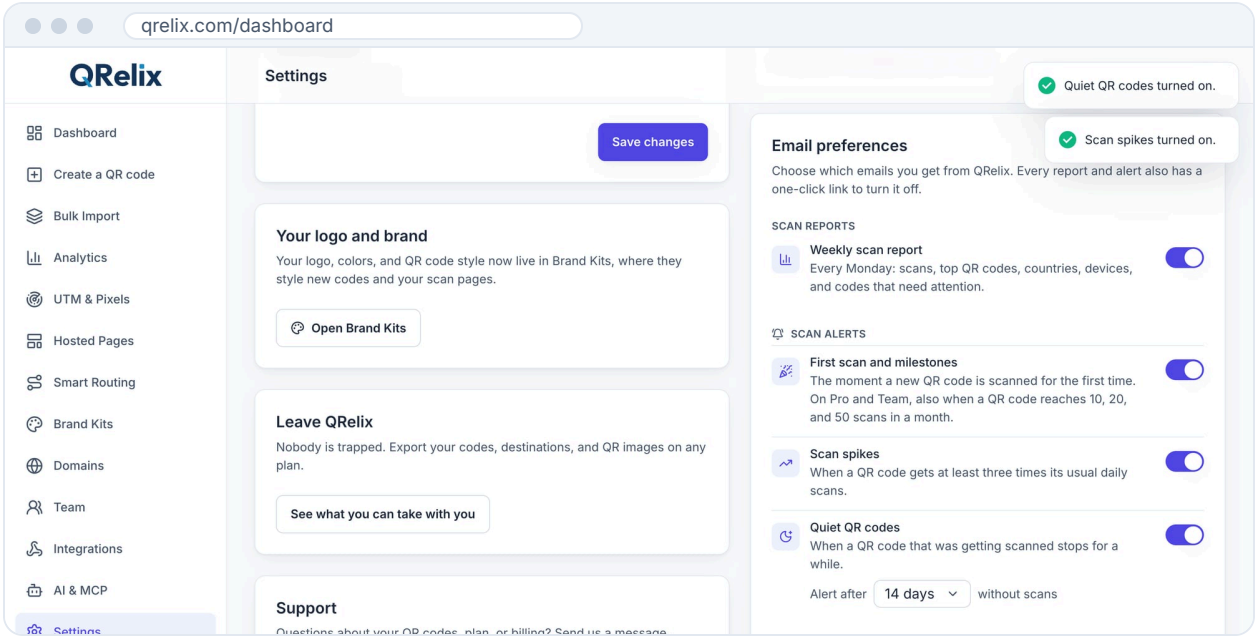

2 Pick your alerts

First scan and milestones emails you the moment a new code is scanned for the first time. On Pro and Team it also marks 10, 20, and 50 scans in a month.

3 Spikes and quiet codes

Scan spikes tells you when a code gets at least three times its usual daily scans. Quiet QR codes tells you when a code that was getting scanned stops for a while, which often means a sign was moved or covered.

Good to know

Push on your phone

In the QRelix iPhone app, open Account, then Notifications, to get the same alerts as push notifications.

Quiet means look

A quiet alert often means a sign was moved, covered, or taken down. It is worth a walk past.

Easy to turn off

Every report and alert email has a one-click link to stop it.

Milestones on Pro

First scan alerts are on every plan. Pro and Team add milestones at 10, 20, and 50 scans a month.

Create your first smart QR code.

Free plan, no credit card. Edit the link after printing and see every scan.
