HOW-TO GUIDE

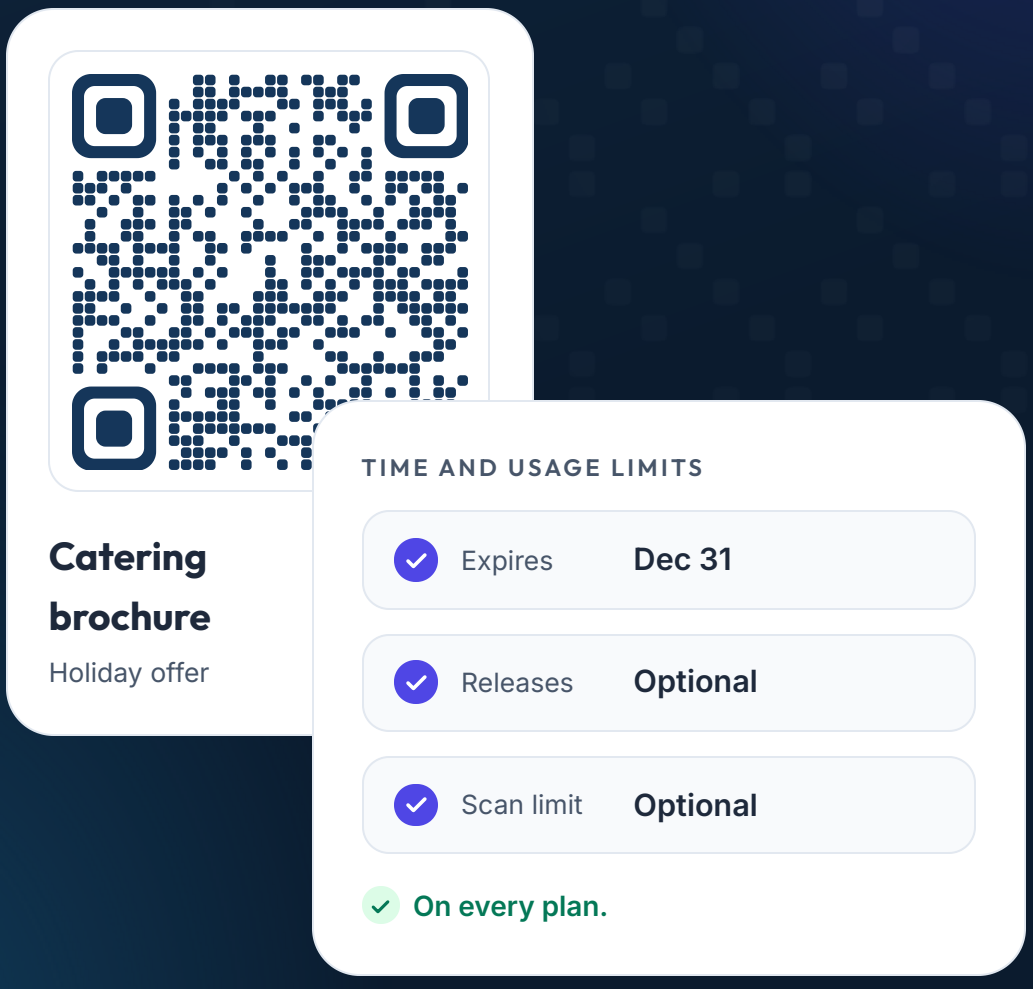

Make a QR code expire

Codes that vanish on a date, go live on a date, or stop after a number of scans.

4 steps
with screenshots

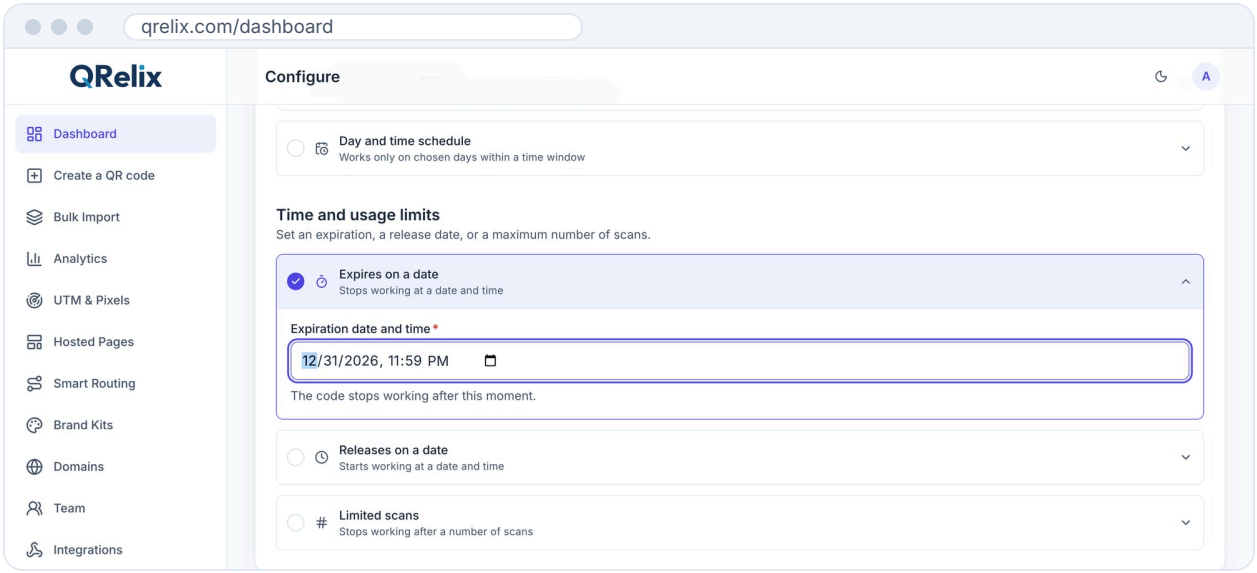

WHY IT MATTERS

Codes that know when to stop.

- **Vanishing** Ends on a date
- **Time-released** Goes live on a date
- **Limited use** Stops after so many scans

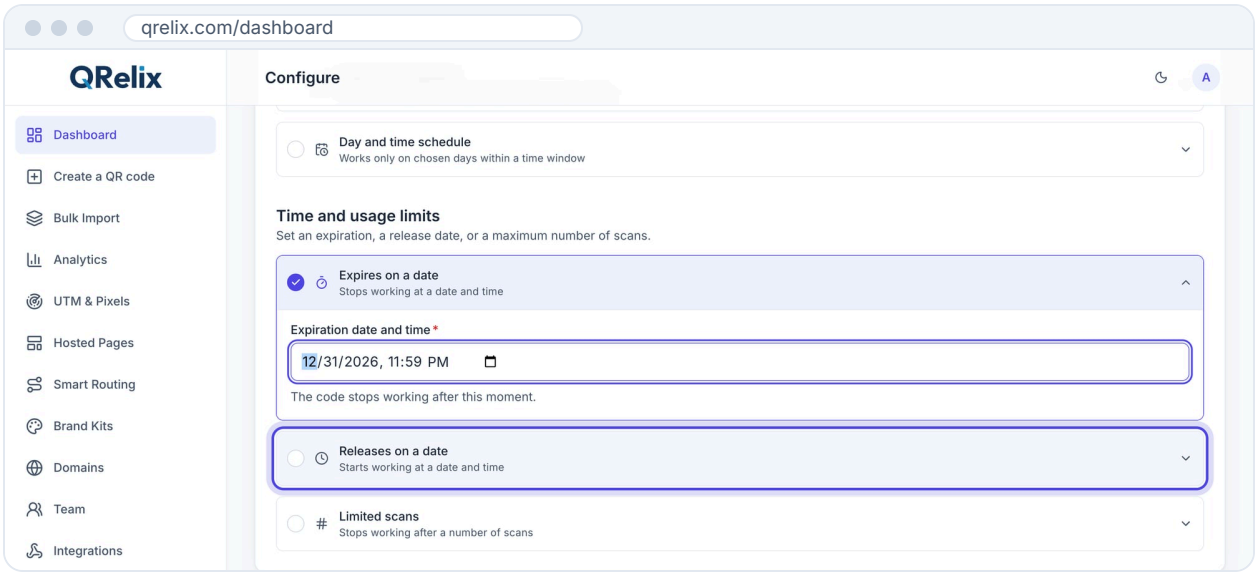

1 Expire on a date

Open the code, select Edit, then More settings. Under Time and usage limits, choose Expires on a date and set the date and time it should stop working.

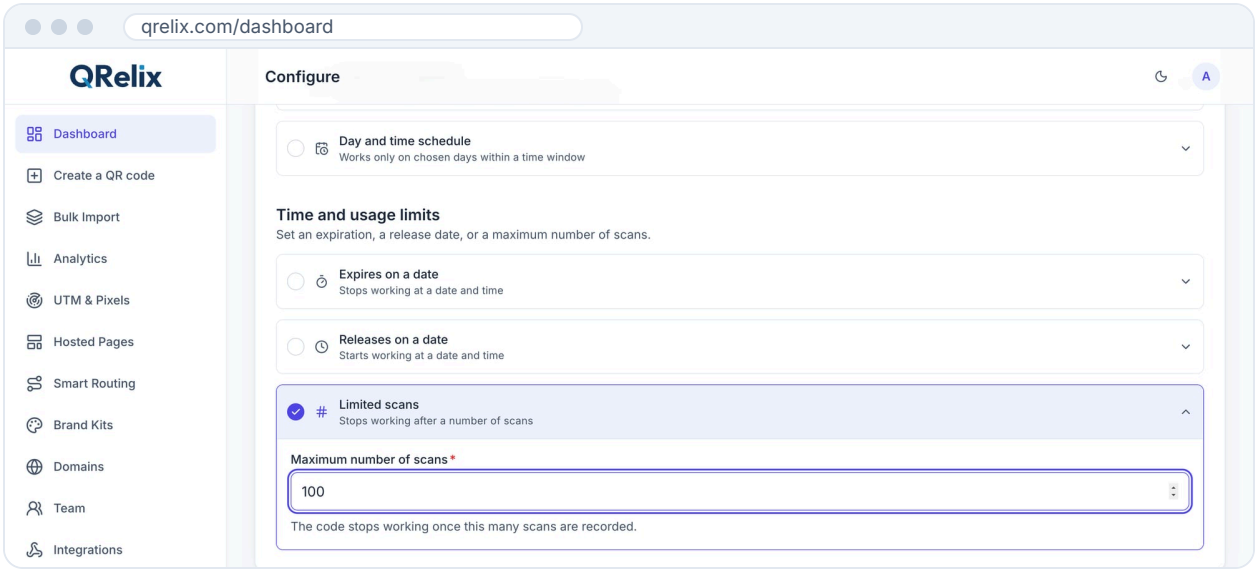

2 Or release it on a date

Releases on a date keeps the code closed until the date and time you set. Scanners before then are told it isn't available yet.

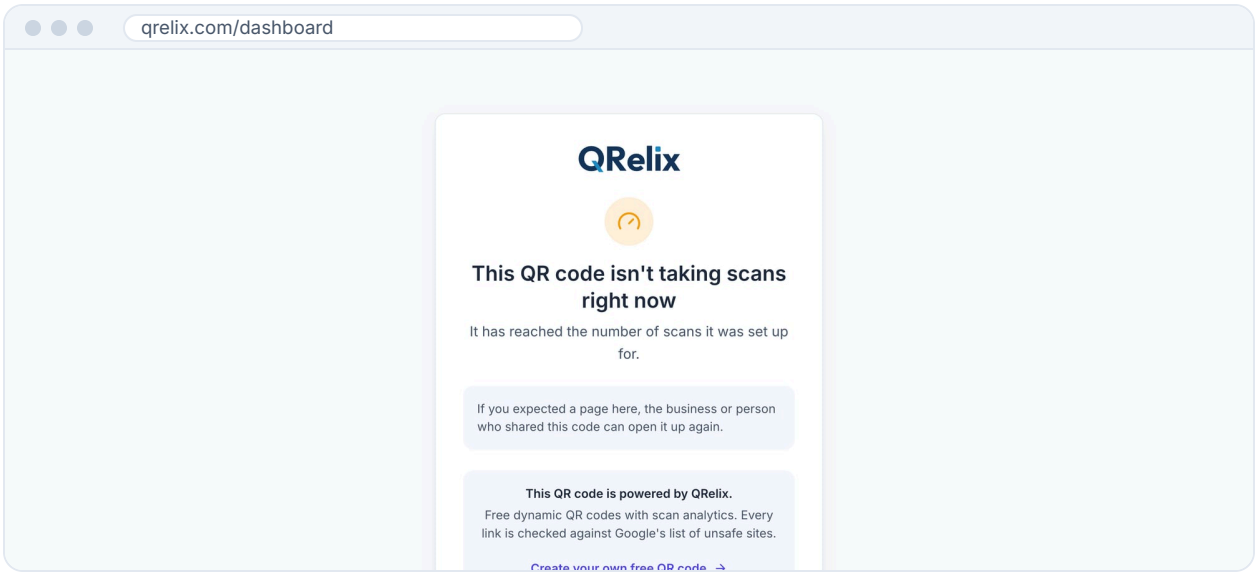

3 Or limit the scans

Limited scans stops the code once a number of scans are recorded, which suits samples, giveaways, and one-time offers. One time or usage limit applies at a time.

4 What scanners see when it ends

After the limit or the expiration date, scanners see a short message saying the code isn't taking scans. Change or remove the limit at any time; the printed code stays the same.

Good to know

Want a fallback page?

To send late scans somewhere useful instead of stopping, use a Smart Route with a date range or first scans rule.

One limit at a time

Pick one: expires, releases, or a scan limit. Access rules like a password work alongside it.

Change your mind

Extend the date, raise the limit, or remove it at any time. Nothing needs reprinting.

Every plan

Expiration, release dates, and scan limits are on Free, Pro, and Team.

Create your first smart QR code.

Free plan, no credit card. Edit the link after printing and see every scan.
